1 INTRODUCTION

This report presents the findings of the traffic impact analysis (TIA) for the proposed Allen Park Development. The development will be located off Old Milburnie Road and Forestville Road, in Knightdale, NC (see **Figure 1-1**).

The proposed development is planned for construction in 2027. Per Town of Knightdale standards / guidelines, analyses were completed for the 2020 Existing traffic volumes, 2028 Background traffic volumes, and 2028 Build traffic volumes (Background + site trips), 2038 Horizon Year traffic volumes (2028 Build + 10 years). The purpose of this assessment is as follows:

1. Verify that the existing geometry provided within the study area is sufficient to accommodate the projected traffic volumes;

2. Determine what, if any, improvements are necessary at the proposed site driveway connections; and

3. Provide an analysis of the future horizon year (2038).

The following steps were taken to determine the potential traffic impacts associated with this project:

1. Data Collection – AM (7:00 – 9:00) and PM (4:00 – 6:00) peak hour turning movement counts were collected on December 17th, 2020 at the following intersections:

   - SR 2049 (Forestville Road) / SR 2228 (Old Crews Road);
   - SR 2049 (Forestville Road) / SR 2231 (Horton Road) / SR 2233 (Smithfield Road); and
   - SR 2217 (Old Milburnie Road) / US-64 Business (New Bern Avenue).

   AM (7:00 – 9:00) and PM (4:00 – 6:00) peak hour turning movement counts were collected on September 18th, 2018 at the following intersections:

   - SR 2049 (Forestville Road) / SR 2215 (Buffalo Road).

   AM (7:00 – 9:00) and PM (4:00 – 6:00) peak hour turning movement counts were collected on June 5th, 2018 at the following intersections:

   - SR 2049 (Forestville Road) / SR 2217 (Old Milburnie Road).

   48-hour tube counts were collected on December 16th and December 17th, 2020 along Old Milburnie Road south of Forestville Road.

2. Trip Generation/Future Traffic – Traffic generated by the proposed development was estimated using the 10th Edition of the Institute of Transportation Engineer's (ITE) *Trip Generation Manual*. Trip generation was calculated for the development following the NCDOT standards and practices for trip generation. Projected traffic volumes were calculated using a 3% ambient growth rate. Per the scoping document (see **Appendix A**), there are no approved developments in the project study area that will generate trips.

3. Trip Distribution and Projections – The distribution of site-generated trips was based on the distribution of existing area traffic and engineering judgement. It was assumed, for purposes of analysis, that projected trips would follow similar patterns as existing traffic.

4. Traffic Capacity Analysis – Level of service analyses were performed using SYNCHRO Version 10.3 for the following intersections:

    - SR 2049 (Forestville Road) / SR 2215 (Buffalo Road) - Signalized;
    - SR 2049 (Forestville Road) / SR 2217 (Old Milburnie Road) - Unsignalized;
    - SR 2049 (Forestville Road) / Site Driveway #3 – Unsignalized;
    - SR 2049 (Forestville Road) / SR 2228 (Old Crews Road) - Unsignalized;
    - SR 2049 (Forestville Road) / SR 2231 (Horton Road) / SR 2233 (Smithfield Road) – Signalized;
    - SR 2217 (Old Milburnie Road) / Site Driveway #1 – Unsignalized;
    - SR 2217 (Old Milburnie Road) / Site Driveway #2 – Unsignalized; and
    - SR 2217 (Old Milburnie Road) / US-64 Business (New Bern Avenue) - Signalized.

5. Review of Proposed Improvements – Roadway improvements proposed to accommodate projected site-generated traffic were evaluated.

Allen Park
Traffic Impact Analysis
Site Location Map

Figure 1-1

2 EXISTING INFORMATION

The development will be located off Old Milburnie Road and Forestville Road, in Knightdale, NC (see **Figure 1-1**).

2.1 STUDY LIMITS

Access to the proposed site will be provided via three (3) full movement site driveway connections. Site Driveway #1 will be located off Old Milburnie Road, approximately 100' (C/L to C/L) north of the existing Wil-Mar Golf Club driveway. Site Driveway #2 will be located off Old Milburnie Road, approximately 800' (C/L to C/L) south of Site Driveway #1. Site Driveway #3 will be located off Forestville Road southeast of Old Milburnie Road.

The entrances are shown graphically on **Figure 1-1** and on the preliminary site layout for the residential development on **Figure 2-1** (all figures located at the end of their respective chapter).

The study limits include the following eight (8) intersections:

- Forestville Road / Buffalo Road;
- Forestville Road / Old Milburnie Road;
- Forestville Road / Site Driveway #3;
- Forestville Road / Old Crews Road;
- Forestville Road / Horton Road) / Smithfield Road;
- Old Milburnie Road / Site Driveway #1;
- Old Milburnie Road / Site Driveway #2; and
- Old Milburnie Road / US-64 Business.

All study area intersections and project assumptions were approved by the NCDOT / Town and are outlined in the scoping document (see **Appendix A**).

2.2 EXISTING ROADWAYS

SR 2049 (Forestville Road) is a two-lane undivided facility that runs approximately northwest-southeast in the project study area. The facility will provide access to the proposed development and has a posted 45-mph speed limit. Forestville Road connects Rogers Road in the northwest to Old Knight Road in the southeast. The facility primarily services residential and educational land uses. Per 2019 NCDOT Average Annual Daily Traffic (AADT) count maps, Forestville Road carries 3,800 Vehicles Per Day (VPD) south of Old Milburnie Road.

SR 2215 (Buffaloe Road) is a two-lane undivided facility that runs approximately east-west in the project study area. The facility is located north of the proposed development and has a posted 45-mph speed limit. Buffaloe Road connects Horton Road in the east to north Raleigh in the west. The facility primarily services residential and agricultural land uses in the project study area. Per 2019 NCDOT AADT count maps, Buffaloe Road carries 10,000 VPD east of Forestville Road.

SR 2217 (Old Milburnie Road) is a two-lane undivided facility that runs approximately northeast-southwest in the project study area. The facility will provide access to the proposed development and has a posted 45-mph speed limit. Old Milburnie Road connects Rolesville Road in the northeast to US 64 Business in the southwest. The facility primarily services residential and educational land uses in the project study area. Per 2019 NCDOT AADT count maps, Old Milburnie Road carries 4,500 VPD southwest of Forestville Road.

SR 2228 (Old Crews Road) is a two-lane undivided facility that runs approximately north-south in the project study area. The facility is located east of the proposed development and has a posted 45-mph speed limit. Old Crews Road connects Old Milburnie Road in the north to Forestville Road in the south. The facility primarily services residential land uses in the project study area. Per 2019 NCDOT AADT count maps, Old Crews Road carries 1,700 VPD north of Buffaloe Road.

SR 2231 (Horton Road) is a two-lane undivided facility that runs approximately north-south in the project study area. The facility is located east of the proposed development and has a posted 35-mph speed limit inside and outside of school hours. Horton Road connects Marks Creek Road in the north to Forestville Road in the south. The facility primarily services residential and educational land uses in the project study area. Per 2019 NCDOT AADT count maps, Horton Road carries 3,900 VPD north of Forestville Road.

SR 2233 (Smithfield Road) is a two-lane undivided facility that runs approximately north-south in the project study area. The facility is located east of the proposed development and has a posted 35-mph speed limit inside and outside of school hours. Smithfield Road connects Forestville Road in the north to Bissette Road in the south. The facility primarily services residential and commercial land uses in the project study area. Per 2019 NCDOT AADT count maps, Smithfield Road carries 12,500 VPD south of Forestville Road.

US 64 Business (New Bern Avenue) is a four-lane median divided facility that runs approximately east-west in the project study area. The facility is located south of the proposed development and has a posted 45-mph speed limit. US 64 Business connects Zebulon in the east to Raleigh in the west. The facility primarily services residential and commercial land uses. Per 2019 NCDOT AADT count maps, US 64 Business carries 29,500 VPD east of Old Milburnie Road.

2.3 EXISTING INTERSECTIONS

Using available aerial imagery and site visits, Timmons Group compiled the existing geometry for each of the study area intersections. The existing intersection geometry is shown on **Figure 2-2** and used throughout all analyses.

Forestville Road / Buffaloe Road is a four-phase signalized intersection with time of day phasing. All intersection approaches consist of an exclusive left-turn lane and a shared through / right-turn lane.

Forestville Road / Old Milburnie Road is an unsignalized four-way stop intersection. All intersection approaches include a shared left / through / right-turn lane.

Forestville Road / Old Crews Road is an unsignalized T-intersection with the southbound Old Crews Road approach encountering the stop condition. The southbound approach consists of a shared left / right-turn lane. The eastbound approach includes a shared through / left-turn lane. The westbound approach consists of an exclusive through lane and a right-turn lane.

Forestville Road / Horton Road / Smithfield Road is a three-phase signalized intersection with protected-permitted eastbound left-turns. The north, south, and eastbound intersection approaches consist of an exclusive left-turn lane and a shared through / right-turn lane. The westbound approach consists of an exclusive left-turn lane, a through lane, and an exclusive right-turn lane.

US 64 Business / Old Milburnie Road is a six-phase signalized intersection with alternate time of day phasing. The northbound intersection approach consists of an exclusive left-turn lane and a shared through / right-turn lane. The southbound approach consists of a shared through / left-turn lane and two exclusive right-turn lanes. The eastbound approach consists of an exclusive left-turn lane, a through lane,

and a shared through / right-turn lane. The westbound approach consists of an exclusive left-turn lane, two through lanes, and an exclusive right-turn lane.

2.4 TRAFFIC VOLUMES

Timmons Group calculated peak hour volumes for the following study area intersections using the AM (7:00 – 9:00) and PM (4:00 – 6:00) peak period turning movement counts^ undertaken on December 17th, 2020, September 18th, 2018, and June 5th, 2018. Traffic volumes collected in 2018 were grown to 2020 using a 3% annual growth rate for 2 years.

^ At the time of this study, various COVID-19 restrictions were in place which altered existing area traffic volumes (including the Wake County Public School System operating virtually). To account for these restrictions, all turning movement traffic counts were modified by a "COVID-19 Adjustment Factor". To calculate this adjustment factor, Timmons Group conducted a 48-hour tube count along Old Milburnie Road (southwest of Forestville Road) on December 16th and 17th, 2020. 2020 tube counts revealed that Old Milburnie Road experienced an average daily traffic volume of 2,650 VPD (see **Appendix B**). This daily traffic volume was then compared to the published 2019 AADT (4,500 VPD) previously collected in the same location. Utilizing the aforementioned 3% ambient growth rate, a 2020 AADT of 4,635 VPD was calculated. This AADT projection is approximately 75% greater than the 2020 collected traffic volume. However, the published 2015 AADT at the same location was 2,400 VPD. The 87.5% AADT increase from 2015 to 2019 (2,400 VPD to 4,500 VPD) was caused by the construction of East Wake Middle School located on Old Milburnie Road (northeast of Forestville Road). The AM (7:00 – 9:00) peak hour was counted during school peak hours, whereas the PM (4:00 - 6:00) peak hour was counted outside of school peak hours. To account for this discrepancy, it was discussed, and agreed to, with the NCDOT and Town of Knightdale (see **Appendix A**) that all turning movement traffic count volumes (see **Figure 2-3** and **Figure 2-4**) were grown by a 75% COVID-19 Adjustment Factor in the AM peak hour (with the exception of US 64 Business / Old Milburnie Road intersection) and a 5% COVID-19 Adjustment Factor in the PM peak hour. At the US 64 Business / Old Milburnie Road intersection, AM peak hour volumes to and from Old Milburnie Road were increased by 75% where all other volumes were increased by 5% in both peak hours. The adjusted 2020 traffic volumes are shown in **Figure 2-5**. Traffic count data is located in **Appendix B**.

2.5 CAPACITY ANALYSIS

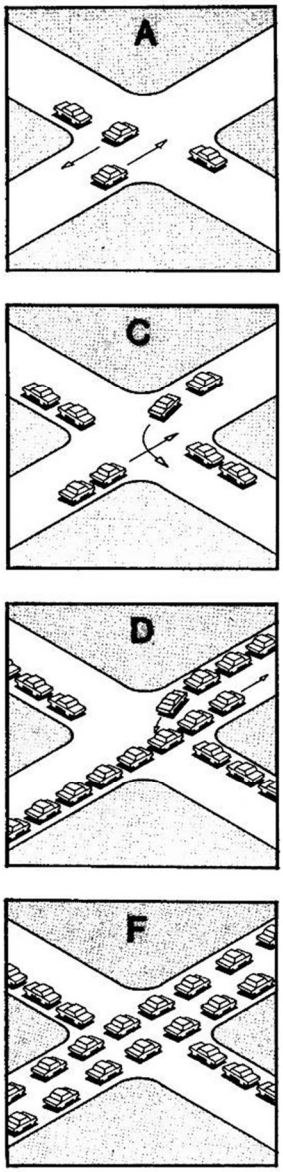
Using field observations, aerial photography, and traffic count data, traffic operations were analyzed during 2020 (existing), 2028 (without and with the proposed development site trips), and 2038 (with the proposed development site trips).

Capacity analysis allows traffic engineers to determine the impacts of traffic on the surrounding roadway network. The Transportation Research Board's (TRB) *Highway Capacity Manual* (HCM) methodologies govern how the capacity analyses are conducted and how the results are interpreted. There are six letter grades of Levels of Service (LOS) from A to F, with LOS A representing the best operating conditions and LOS F the worst operating conditions. At signalized intersections, an overall intersection LOS E is generally considered unacceptable. At unsignalized intersections, a LOS E is generally considered acceptable only if the side street encounters delay. Nevertheless, side streets typically function at a LOS F during peak traffic periods, because the traffic volumes often do not warrant a traffic signal to assist side street traffic. **Table 2-1** shows in detail how each of these levels of service are interpreted.

Table 2-1: Level of Service Definitions

Level of Service	Roadway Segments or Controlled Access Highways	Intersections
A	Free flow, low traffic density.	No vehicle waits longer than one signal indication.
B	Delay is not unreasonable, stable traffic flow.	On a rare occasion motorists wait through more than one signal indication.
C	Stable condition, movements somewhat restricted due to higher volumes, but not objectionable for motorists.	Intermittently drivers wait through more than one signal indication, and occasionally backups may develop behind left turning vehicles, traffic flow still stable and acceptable.
D	Movements more restricted, queues and delays may occur during short peaks, but lower demands occur often enough to permit clearing, thus preventing excessive backups.	Delays at intersections may become extensive with some, especially left-turning vehicles waiting two or more signal indications, but enough cycles with lower demand occur to permit periodic clearance, thus preventing excessive backups.
E	Actual capacity of the roadway invloves delay to all motorists due to congestion.	Very long queues may create lengthly delays, especially for left-turning vehicles.
F	Forced flow with demand volumes greater than capacity resulting in complete congestion. Volumes drop to zero in extreme cases.	Backups from locations downstream restrict or prevent movement of vehicles out of approach creating a storage ares during part or all of an hour.

SOURCE: *"A Policy on Design of Design of Urban Highways and Arterial Streets"* - AASHTO, 1973 based upon material published in *"Highway Capacity Manual"*, National Academy of Sciences, 1965.



For signalized and unsignalized intersections, level of service is defined in terms of **delay**, a measure of driver discomfort, frustration, fuel consumption and lost travel time. **Table 2-2** summarizes the delay associated with each LOS category:

Table 2-2: Signalized and Unsignalized Intersection Level of Service Criteria

Signalized Intersections		Unsignalized Intersections	
Level of Service	Control Delay per Vehicle (sec/veh)	Level of Service	Average Control Delay (sec/veh)
A	≤ 10	A	0 to 10
B	> 10 to ≤ 20	B	> 10 to ≤ 15
C	> 20 to ≤ 35	C	> 15 to ≤ 25
D	> 35 to ≤ 55	D	> 25 to ≤ 35
E	> 55 to ≤ 80	E	> 35 to ≤ 50
F	> 80	F	> 50

Source: Exhibit 16-2 and Exhibit 17-2 from TRB's "Highway Capacity Manual 2000"

Capacity analyses were performed to assess operational conditions. Study area intersections were analyzed using SYNCHRO Version 10.3 based on Highway Capacity Manual (HCM) methodologies with the following assumptions:

- Existing grades;
- 12-foot lane widths;
- No parking activity, bus stops, or pedestrians;
- PHFs of 0.90 were used for all analyses;
- A minimum of four (4) vehicles per analyzed intersection movement;
- Heavy vehicle percentages 2%; and
- Existing signal data / timing values found in the traffic signal plans (see **Appendix D**).

3 EXISTING AND BACKGROUND CONDITIONS AND ANALYSIS

3.1 2020 EXISTING ANALYSES

Table 3-1 summarizes the 2020 Existing intersection LOS and delay based on the geometry shown on **Figure 2-2** and the 2020 traffic volumes shown on **Figure 2-5**. The corresponding SYNCHRO output is included in **Appendix C**.

All approaches at the unsignalized intersection of Forestville Road / Old Crews Road are currently operating at a LOS B or better during the 2020 Existing AM and PM peak hours.

The westbound and northbound approaches at the unsignalized intersection of Old Milburnie Road / Forestville Road are currently operating at a LOS F during the 2020 Existing AM peak hour. All other intersection approaches are currently operating at a LOS D or better during both peak hours.

The signalized intersection of Forestville Road / Buffaloe Road is currently operating at an overall LOS F during both 2020 Existing AM and PM peak hours. Multiple approaches are currently operating unacceptably during both peak hours.

The signalized intersection of Smithfield Road / Horton Road / Forestville Road is currently operating at an overall LOS B during both 2020 Existing AM and PM peak hours. All intersection approaches are operating at a LOS B.

The signalized intersection of Old Milburnie Road / US 64 Business is currently operating at an overall LOS C during both 2020 Existing AM and PM peak hours. The northbound approach is currently operating unacceptably during the PM peak hour. All other intersection approaches are operating at a LOS D or better during both peak hours.

[1] *Overall intersection LOS and delay reported for signalized intersections and roundabouts only.*

† SYNCHRO does not provide level of service or delay for unsignalized movements with no conflicting volumes.

**Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO.

3.2 BACKGROUND TRAFFIC CONDITIONS

Per the scoping document (see **Appendix A**), there are no public improvement projects in the project study area that will be fully or partially built out by 2028. Additionally, there are no approved developments in the project study area that will be analyzed as part of the background analysis.

As part of an NCDOT safety project, there are current plans to construct a southbound right-turn lane at the intersection of Forestville Road and Buffaloe Road. For purposes of analysis, it was assumed that this turn lane will be constructed prior to all future analysis years.

As part of an area development, there are current plans to construct an exclusive eastbound right-turn lane and lengthen the westbound left-turn lane at the intersection of Old Milburnie Road and US 64 Business. For purposes of analysis, it was assumed that these turn lanes will be constructed prior to all future analysis years.

Figure 3-1 shows the 2028 background traffic volumes calculated using a 3% annual growth rate.

3.3 2028 BACKGROUND ANALYSIS

Table 3-2 summarizes the 2028 Background intersection LOS and delay based on the geometry shown in **Figure 2-2** (and improvements described) and the 2028 Background traffic volumes shown in **Figure 3-1**. The corresponding SYNCHRO output is included in **Appendix C**.

All approaches at the unsignalized intersection of Forestville Road / Old Crews Road are projected to operate at a LOS C or better during the 2028 Background AM and PM peak hours.

All approaches at the unsignalized intersection of Old Milburnie Road / Forestville Road are projected to operate unacceptably during the 2028 Background AM peak hour. All intersection approaches are projected to operate at a LOS C or better during the PM peak hour.

The signalized intersection of Forestville Road / Buffaloe Road is projected to operate at an overall LOS F during both 2028 Background AM and PM peak hours. Multiple approaches are projected to operate unacceptably during both peak hours.

The signalized intersection of Smithfield Road / Horton Road / Forestville Road is projected to operate at an overall LOS B during both 2028 Background AM and PM peak hours. All intersection approaches are projected to operate at a LOS B.

The signalized intersection of Old Milburnie Road / US 64 Business is projected to operate at an overall LOS C and D during the 2028 Background AM and PM peak hours, respectively. The northbound approach is projected to operate unacceptably during both peak hours. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

Allen Park
Traffic Impact Analysis
2028 Background Traffic Volumes

Figure 3-1

4 SITE TRIP GENERATION AND DISTRIBUTION

Site trips for the Allen Park Development were estimated based on the proposed land use supplied by the developer and subsequently distributed onto the surrounding roadway network.

4.1 TRIP GENERATION

The site-generated trips shown in **Table 4-1** are based on trip generation information provided in the 10th Edition of the ITE's *Trip Generation Manual* and the anticipated development of the residential land use. Trip generation was calculated using the provided equation, and the proposed number of residential units as the independent variable (per NCDOT standards).

Table 4-1: Trip Generation Summary

ITE Land Use Code	Independent Variable	Daily			AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total	In	Out	Total
210 – Single Family Detached Housing	447 Units	2,062	2,062	4,124	81	242	322	270	158	428
220 – Multifamily Housing (Low-Rise)	173 Units	634	634	1,268	18	62	80	60	36	96
Total:		2,696	2,696	5,392	99	303	402	330	194	524

SOURCE: Institute of Transportation Engineers' *Trip Generation Manual* 10th Edition (2017)

AM peak hour trips generated totaled 99 incoming and 303 outgoing where PM peak hour trips totaled 330 incoming and 194 outgoing. Average daily traffic (ADT) volumes generated by the development totaled 5,392 vehicles per day. No reduction in trips was included due to internal capture and/or pass-by trips.

4.2 TRIP DISTRIBUTION

The directional traffic patterns, or trip distribution, of the site-generated traffic was determined using the existing AM and PM peak hour traffic characteristics as well as engineering judgment. It was assumed, for purposes of this study, that all site traffic would enter and exit the study area in the same manner as the existing traffic. The percentages were routed, via shortest path, to and from the proposed development. This distribution was submitted to, reviewed, and approved by the NCDOT and Town of Knightdale prior to the submittal of this study. The distribution percentages were then applied to the generated trips to predict routes and project traffic volumes for the 2028 Build scenario. **Figure 4-1** shows the trip distribution percentages. **Figure 4-2** shows the trip distribution volumes. 2028 Build traffic volumes were determined by applying the combined site trip distribution volumes to the Background traffic volumes (see **Figure 3-1**).

5 BUILD CONDITION AND ANALYSIS

To complete the 2028 Build analyses (including the proposed development), the estimated site trips were added to the 2028 Background traffic volumes. The projected total volumes, along with the existing intersection geometry, were used to complete the capacity and turn lane warrant analyses.

5.1 BUILD TRAFFIC VOLUMES

The Background traffic volumes were added to the projected site trips from the Allen Park Development to generate the Build traffic volumes (background + site).

The 2028 Build traffic volumes shown on **Figure 5-1** contain the following:

- Existing 2020 turning movement traffic count volumes grown exponentially for 8 years at a 3% ambient growth rate (**Figure 3-1**); and
- Total site trips generated by the subject development (**Figure 4-2**).

5.2 2028 BUILD ANALYSIS

Table 5-1 summarizes the intersection LOS and delay based on the geometry shown in **Figure 2-2** and the 2028 Build traffic volumes shown in **Figure 5-1**. The corresponding SYNCHRO output is included in **Appendix C**.

All approaches at the unsignalized intersection of Site Driveway #3 / Forestville Road are projected to operate at a LOS D or better during the 2028 Build AM and PM peak hours. Per the NCDOT Policy on Street and Driveway Access to North Carolina Highways Manual:

"Generally left and right turn lanes and tapers shall be considered when:

- *In accordance with G.S. 136-18(29), the average daily traffic meets or exceeds 4,000 vehicles per day on any secondary route (the average daily traffic should include both the existing traffic plus traffic generated by the proposed development)"*

Per the NCDOT AADT maps, Forestville Road will exceed 4,000 VPD in 2028. Because of this, turn lanes were considered at Site Driveway #3. Per the NCDOT Nomograph (see **Appendix E**) and projected 2028 peak hour volumes, a 50-foot eastbound right-turn lane (with appropriate taper) and a 50-foot westbound left-turn lane (with appropriate taper) are recommended. Per **Table 5-2**, following this improvement, all approaches are projected to continue to operate acceptably.

All approaches at the unsignalized intersection of Forestville Road / Old Crews Road are projected to operate at a LOS C or better during the 2028 Build AM and PM peak hours. No improvements are recommended at this intersection due to the construction of the subject development.

All approaches at the unsignalized intersection of Old Milburnie Road / Site Driveway #1 are projected to operate at a LOS D or better during the 2028 Build AM and PM peak hours. It is projected that the AADT along Old Milburnie Road will exceed 4,000 VPD in 2028. Because of this, turn lanes were considered at Site Driveway #1. Per the NCDOT Nomograph (see **Appendix E**) and projected 2028 peak hour volumes, the construction a 100-foot northbound right-turn lane (with appropriate taper) and a 50-foot southbound left-turn lane (with appropriate taper) are recommended. Per **Table 5-2**, following this improvement, all approaches are projected to continue to operate acceptably.

All approaches at the unsignalized intersection of Old Milburnie Road / Site Driveway #2 are projected to operate at a LOS C or better during the 2028 Build AM and PM peak hours. As previously stated, Old Milburnie Road will exceed 4,000 VPD in 2028. Because of this, turn lanes were considered at Site Driveway #2. A northbound right-turn lane was considered but was deemed infeasible due to its proximity to the I-540 bridge and NCDOT control of access. Per the NCDOT Nomograph (see **Appendix E**) and projected 2028 peak hour volumes, the construction a 100-foot northbound right-turn lane (with appropriate taper) and a 50-foot southbound left-turn lane (with appropriate taper) are recommended. Per **Table 5-2**, following this improvement, all approaches are projected to continue to operate acceptably.

All approaches at the unsignalized intersection of Old Milburnie Road / Forestville Road are projected to operate at an unacceptable LOS during the 2028 Build AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during the PM peak hour. There are no geometric improvements that would cause the intersection to operate acceptably as an all-way stop intersection. Despite this, to help with overall intersection operations, it is recommended that 100-foot left-turn lanes (with appropriate taper lengths) be constructed on both Old Milburnie Road intersection approaches. These turn lanes will help provide additional storage for queued vehicles. It should be noted that this improvement is dependent upon the availability of right-of-way. It is currently unknown if adequate right-of-way is available at this intersection to accommodate these improvements. Although intersection signalization with the construction of turn lanes would allow for the intersection to operate acceptably, current traffic volumes (COVID-19 impacted) do not meet MUTCD peak hour signal warrants. This intersection should be monitored (by future area developments) for intersection signalization.

The signalized intersection of Forestville Road / Buffaloe Road is projected to operate at an overall LOS F during both 2028 Build AM and PM peak hours. Multiple approaches are projected to operate unacceptably during both peak hours. Although the intersection is projected to operate unacceptably, no improvements are recommended at this intersection due to the construction of the proposed development. The subject development increases delay by less than 14% on all approaches, except for the AM northbound approach (delay to be increased by 36%). The intersection delay is caused by high volume on all approaches. Although the subject development increases northbound left-turn delay during the AM peak hour, there is currently a northbound left-turn lane with significant storage. Without two receiving lanes along Buffaloe Road, the construction of dual northbound left-turn lane (to help movement delay) is infeasible. Because of this, no improvements are recommended at this intersection due to the construction of the subject development.

The signalized intersection of Smithfield Road / Horton Road / Forestville Road is projected to operate at an overall LOS B during both 2028 Build AM and PM peak hours. All intersection approaches are projected to operate at a LOS B. No improvements are recommended at this intersection due to the construction of the subject development.

The signalized intersection of Old Milburnie Road / US 64 Business is projected to operate at an overall LOS C and E during the 2028 Build AM and PM peak hours, respectively. The northbound approach is projected to operate at a LOS E during both peak hours. The eastbound approach is projected to operate at a LOS E during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours. Although the intersection is projected to operate unacceptably during the PM peak hour, no improvements are recommended at this intersection due to the construction of the proposed development. The subject development increases delay by less than 10% on all approaches, except for the PM eastbound approach. The intersection delay is caused by significant commuter volumes along US 64 Business. It should be noted that with right-turns on red allowed (currently shown as prohibited per NCDOT standards), the intersection is projected to operate acceptably during both peak hours. Because of this, no improvements are recommended at this intersection due to the construction of the subject development.

5.3 2028 BUILD WITH IMPROVEMENTS (UDO REQUIRED)

As discussed, all approaches at the unsignalized intersection of Old Milburnie Road / Forestville Road are projected to operate at an unacceptable LOS during the 2028 Build AM peak hour. Per the Town's UDO, the following improvement was identified (but not recommended of this development) to either maintain an acceptable LOS or the existing LOS (if existing LOS is E or worse) and delay (as close as possible) during the full build-out scenario for each traffic movement and approach:

- Construction of a roundabout; or
- Intersection signalization with the following:
    - Construction of an eastbound left-turn lane
    - Construction of a westbound left-turn lane
    - Optimized signal timings

The signalized intersection of Forestville Road / Buffaloe Road is projected to operate at a LOS F during both peak hours. Multiple approaches are projected to operate unacceptably during both peak hours. The following improvements were identified to either maintain an acceptable LOS or the existing LOS and delay for each traffic movement and approach:

- Construction of dual northbound left-turn lanes with an additional westbound receiving lane (along Buffaloe Road);
- Construction of an eastbound right-turn lane;
- Signal optimization; and
- Enabling right-turns on red

The signalized intersection of Old Milburnie Road / US 64 Business is projected to operate at a LOS C and E during the 2028 Build AM and PM peak hours, respectively. Multiple approaches are projected to operate unacceptably during both peak hours. The following improvements were identified to allow for all intersection movements to operate acceptably:

- Signal optimization; and
- Enabling right-turns on red

Following the construction of the improvements above, all intersections / intersection movements are projected to operate at an acceptable LOS or at the Existing LOS (see **Table 5-3)**. **Figure 6-1** shows the UDO required improvements. The corresponding SYNCHRO outputs are provided in **Appendix C**.

5.4 2038 HORIZON YEAR ANALYSIS

To complete the 2038 Horizon Year analyses (including the proposed development), the 2028 Background traffic volumes were grown at a 3% ambient growth rate for eighteen (18) years and added to the estimated site trips. The projected total volumes, along with the proposed intersection geometry (see **Figure 6-1**), were used to complete the capacity and turn lane warrant analyses.

The 2038 Horizon Year traffic volumes shown on **Figure 5-2** contain the following:

- Existing 2020 turning movement traffic count volumes grown exponentially for 18 years at a 3% ambient growth rate; and

- Total site trips generated by the subject development (**Figure 4-2**).

Table 5-4 summarizes the intersection LOS and Delay based on the 2038 Horizon Year traffic volumes (see **Figure 5-2**). The corresponding SYNCHRO outputs are included in **Appendix C**.

The northbound approach at the unsignalized intersection of Site Driveway #3 / Forestville Road is projected to operate at a LOS F during the 2038 Horizon Year AM peak hour. All other intersection approaches are projected to operate at a LOS C or better during both peak hours.

The southbound approach at the unsignalized intersection of Forestville Road / Old Crews Road is projected to operate at a LOS E during the 2038 Horizon Year AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

The westbound approach at the unsignalized intersection of Old Milburnie Road / Site Driveway #1 is projected to operate at a LOS F during the 2038 Horizon Year AM peak hour. All other intersection approaches are projected to operate at a LOS C or better during both peak hours.

The westbound approach at the unsignalized intersection of Old Milburnie Road / Site Driveway #2 is projected to operate at a LOS F during the 2038 Horizon Year AM peak hour. All other intersection approaches are projected to operate at a LOS C or better during both peak hours.

Multiple approaches at the unsignalized intersection of Old Milburnie Road / Forestville Road are projected to operate at an unacceptable LOS during both 2038 Horizon Year peak hours.

The signalized intersection of Forestville Road / Buffaloe Road is projected to operate at an overall LOS F during both 2038 Horizon Year AM and PM peak hours. Multiple approaches are projected to operate unacceptably during both peak hours.

The signalized intersection of Smithfield Road / Horton Road / Forestville Road is projected to operate at an overall LOS C during both 2038 Horizon Year AM and PM peak hours. All intersection approaches are projected to operate at a LOS C or better during both peak hours.

The signalized intersection of Old Milburnie Road / US 64 Business is projected to operate at an overall LOS D and F during the 2038 Horizon Year AM and PM peak hours, respectively. Multiple approaches are projected to operate unacceptably during both peak hours.

6 CONCLUSIONS AND RECOMMENDATIONS

Capacity analyses were performed for 2020 Existing, 2028 Background, 2028 Build (Background + site trips) traffic volumes, 2028 Build + Improvements, 2028 Build + UDO Improvements, and 2038 Horizon Year (2038 background + site trips) traffic volumes. **Figure 6-1** shows the recommended improvements discussed below.

- All approaches at the unsignalized intersection of Site Driveway #3 / Forestville Road are projected to operate at a LOS D or better during the 2028 Build AM and PM peak hours. Per NCDOT requirements, the following intersection improvements are recommended:
    - Construction of a 50' eastbound right-turn lane (with appropriate taper)
    - Construction of a 50' westbound left-turn lane (with appropriate taper)

- All approaches at the unsignalized intersection of Forestville Road / Old Crews Road are projected to operate at a LOS C or better during the 2028 Build AM and PM peak hours. No improvements are recommended at this intersection due to the construction of the subject development.

- All approaches at the unsignalized intersection of Old Milburnie Road / Site Driveway #1 are projected to operate at a LOS D or better during the 2028 Build AM and PM peak hours. Per NCDOT requirements, the following intersection improvements are recommended:
    - Construction of a 100' northbound right-turn lane (with appropriate taper)
    - Construction of a 50' southbound left-turn lane (with appropriate taper)

- All approaches at the unsignalized intersection of Old Milburnie Road / Site Driveway #2 are projected to operate at a LOS D or better during the 2028 Build AM and PM peak hours. Per NCDOT requirements, the following intersection improvements are recommended:
    - Construction of a 100' northbound right-turn lane (with appropriate taper)
    - Construction of a 50' southbound left-turn lane (with appropriate taper)

- All approaches at the unsignalized intersection of Old Milburnie Road / Forestville Road are projected to operate at an unacceptable LOS during the 2028 Build AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during the PM peak hour. To help improve intersection operations, the following improvements are recommended:
    - Construction of a 100-foot eastbound left-turn lane (with appropriate taper)
    - Construction of a 100-foot westbound left-turn lane (with appropriate taper)

- The signalized intersection of Forestville Road / Buffaloe Road is projected to operate at an overall LOS F during both 2028 Build AM and PM peak hours. Multiple approaches are projected to operate unacceptably during both peak hours. Northbound dual left-turn lanes are necessary to make the northbound approach operate acceptably; however, dual left-turn lanes are not feasible at this location as only one receiving lane exists along Buffaloe Road. No improvements are recommended at this intersection due to the construction of the subject development.

- The signalized intersection of Smithfield Road / Horton Road / Forestville Road is projected to operate at an overall LOS B during both 2028 Build AM and PM peak hours. All intersection approaches are projected to operate at a LOS B. No improvements are recommended at this intersection due to the construction of the subject development.

- The signalized intersection of Old Milburnie Road / US 64 Business is projected to operate at an overall LOS C and E during the 2028 Build AM and PM peak hours, respectively. Per the UDO analysis, enabling right-turns on red along with optimized signal timings will result in an acceptable overall intersection LOS, as well as an acceptable LOS for all approaches during both peak hours.

Because of this, no improvements are recommended at this intersection due to the construction of the subject development.

Appendix A – Scoping Documents

TIMMONS GROUP
YOUR VISION ACHIEVED THROUGH OURS.

Allen Park Development Meeting Minutes (12/10/20)

Attendees:

Sean Brennan	NCDOT (District)	spbrennan@ncdot.gov
Clarence Bunting	NCDOT (Cong. Man.)	cbunting@ncdot.gov
Kevin Lewis	Town of Knightdale	kevin.lewis@knightdalenc.gov
Brian Massengill	Natelli Communities	brian@natelli.com
Beth Blackmon	Timmons Group	beth.blackmon@timmons.com
Cliff Lawson	Timmons Group	cliff.lawson@timmons.com
Jeff Hochanadel	Timmons Group	jeff.hochanadel@timmons.com

Items Discussed:

- A scoping meeting was held to discuss the Allen Park TIA
- The proposed development will consist of 620 residential units
- The proposed development will be constructed by 2027
- There are two proposed site driveways connections to Old Milburnie Road
- There is one proposed site driveway connection to Forestville Road
- Timmons Group will analyze the following conditions:
    - 2020 Existing
    - 2027 Background
    - 2027 Build
    - 2027 Build + Improvements (as needed)
- 3% ambient growth rate
- Timmons Group will analyze the following study area intersections:
    - Site Driveway 1 / Old Milburnie Road
    - Site Driveway 2 / Old Milburnie Road
    - Site Driveway 3 / Forestville Road
    - Buffaloe Road / Forestville Road
    - Old Milburnie Road / Forestville Road
    - Old Milburnie Road / US-64 Business
    - Forestville Road / Smithfield Road / Horton Road*

* Intersection added by Town of Knightdale

- No approved area developments:
- No high crash locations
- No STIP / Town funded roadway improvement projects
- Timmons Group will attempt to locate existing area turning movement traffic counts
- Town will provide a 2018 draft TIA for a parcel north of Old Lewis Farm Road which includes area count data
- Timmons Group will supplement available count data with collected turning movement traffic counts
- A COVID-19 factor will be applied to any newly conducted turning movement traffic counts
- Timmons Group will provide TIA scoping meeting minutes which will serve as the project scope
- Three (3) TIA hard copies will be submitted to the Town of Knightdale (per the UDO)
- Electronic TIA copies will be submitted to the NCDOT

5410 Trinity Rd. Suite 102 | Raleigh, NC 27607

www.timmons.com
Site Development | Residential | Infrastructure | Technology

TIMMONS GROUP

YOUR VISION ACHIEVED THROUGH OURS.

Per a 12/15/20 email from the Town:

- Per Town standards, the following updated conditions will be analyzed:
  - 2020 Existing
  - 2028 Background
  - 2028 Build (2027 Build + 1 Year)
  - 2028 Build + Improvements (as needed)
  - 2038 Future (2028 + 10 Years)
- The TIA will offer capacity mitigation recommendations where LOS values fall below LOS D
- Timmons Group will provide trip distribution percentages to the Town (for review) prior to submitting the TIA
- The following study area intersection was added to the project scope:
  - Forestville Road / Old Crews Road

Jake Glas

Subject: RE: [External] Allen Park TIA

Jeff,

I'm comfortable with this if the Town and District are.

Thanks,
Clarence

Subject: [External] Allen Park TIA

Clarence,

Timmons Group is currently working on the Allen Park TIA in Knightdale, NC. Per the approved scope, the following intersections are included in the project study area:

- Buffaloe Road / Forestville Road
- Old Milburnie Road / Forestville Road
- Old Milburnie Road / US-64 Business*
- Forestville Road / Old Crews Road*
- Forestville Road / Smithfield Road / Horton Road*

Timmons Group collected turning movement traffic counts at the starred* intersections above and will utilize existing turning movement counts found for the unstarred locations.

Along with the turning movement counts, we collected a 48-hour tube count along Old Milburnie Road south / west of Forestville Road. Our intention is to compare the 2020 ADT (calculated using the tube count data) to the NCDOT AADT count (grown to 2020) conducted at the same location to determine a Covid-19 adjustment factor. Based on the 2020 48-hour tube count, Timmons Group calculated a 2020 ADT of approximately 2,650 VPD. As shown below, the published 2015 AADT at this location was 2,400 VPD and the 2019 AADT in this location was 4,500 VPD. I believe the increase between 2015 and 2019 was due to the construction / modification to a school off Old Milburnie Road, just east of the count location.

When we compare our 2020 ADT estimate to the projected 2020 AADT (using the 2019 AADT), we calculate a Covid-19 factor of 175%. When we compare our 2020 ADT estimate to the projected 2020 AADT (using the 2015 AADT), we calculate a Covid-19 factor of 105%.

I believe it makes sense to modify the AM peak hour volumes at the intersections of Old Milburnie Road / Old Crews Road and Old Milburnie Road / Forestville Road by 175% to account for Covid-19 as well as the current lack of school traffic. However, I do not agree with modifying the PM peak hour volumes by 175% (as the collected PM peak hour does not coincide with the school peak hour). I propose that the PM peak hour volumes be modified by 105%. The same holds true for the Old Milburnie Road / US-64 Bus intersection volumes. I feel that modifying AM peak hour turning volumes to/from Old Milburnie Road by 175% is appropriate, but I do not feel it would be appropriate to modify PM peak hour turning movement volumes or volumes along US-64 Bus (during either peak) by 175%. For the Old Milburnie Road / US-64 Bus intersection, I propose that we modify the AM peak hour volumes turning to / from Old Milburnie Road by 175% and modify all other volumes at this intersection by 105%.

When the aforementioned factors described above are applied to 2020 peak hour turning movement traffic count volumes, the volumes balance fairly well with the (grown) counts at Forestville Road / Old Milburnie Road (conducted in late 2018).

I want to make sure everyone agrees with the methodology discussed prior to proceeding forward with the study. Thoughts?

Thank You!
Jeff

Kevin,

Please see the attached trip distribution percentages and volumes. The percentages are based on the existing area traffic volumes. Because this land use is similar to adjacent residential land uses, there was no reason to believe the projected traffic would behave differently.

Although I really believe the volume to/from Old Crews Road will be negligible, we did show a small percentage accessing the facility.

Please review and let me know if you have any questions / comments. Please let me know if you need any additional information from Timmons Group.

Thank You!
Jeff

Jeff,

Thanks for the analysis and summary. We do not have any issues with these modifications and are comfortable with moving forward.

Have you been able to determine the trip distribution based on this information as well?

Thanks,

Subject: Allen Park TIA

Clarence,

Timmons Group is currently working on the Allen Park TIA in Knightdale, NC. Per the approved scope, the following intersections are included in the project study area:

- Buffaloe Road / Forestville Road
- Old Milburnie Road / Forestville Road
- Old Milburnie Road / US-64 Business*
- Forestville Road / Old Crews Road*
- Forestville Road / Smithfield Road / Horton Road*

Timmons Group collected turning movement traffic counts at the starred* intersections above and will utilize existing turning movement counts found for the unstarred locations.

Along with the turning movement counts, we collected a 48-hour tube count along Old Milburnie Road south / west of Forestville Road. Our intention is to compare the 2020 ADT (calculated using the tube count data) to the NCDOT AADT count (grown to 2020) conducted at the same location to determine a Covid-19 adjustment factor. Based on the 2020 48-hour tube count, Timmons Group calculated a 2020 ADT of approximately 2,650 VPD. As shown below, the published 2015 AADT at this location was 2,400 VPD and the 2019 AADT in this location was 4,500 VPD. I believe the increase between 2015 and 2019 was due to the construction / modification to a school off Old Milburnie Road, just east of the count location.

When we compare our 2020 ADT estimate to the projected 2020 AADT (using the 2019 AADT), we calculate a Covid-19 factor of 175%. When we compare our 2020 ADT estimate to the projected 2020 AADT (using the 2015 AADT), we calculate a Covid-19 factor of 105%.

I believe it makes sense to modify the AM peak hour volumes at the intersections of Old Milburnie Road / Old Crews Road and Old Milburnie Road / Forestville Road by 175% to account for Covid-19 as well as the current lack of school traffic. However, I do not agree with modifying the PM peak hour volumes by 175% (as the collected PM peak hour does not coincide with the school peak hour). I propose that the PM peak hour volumes be modified by 105%. The same holds true for the Old Milburnie Road / US-64 Bus intersection volumes. I feel that modifying AM peak hour turning volumes to/from Old Milburnie Road by 175% is appropriate, but I do not feel it would be appropriate to modify PM peak hour turning movement volumes or volumes along US-64 Bus (during either peak) by 175%. For the Old Milburnie Road / US-64 Bus intersection, I propose that we modify the AM peak hour volumes turning to / from Old Milburnie Road by 175% and modify all other volumes at this intersection by 105%.

When the aforementioned factors described above are applied to 2020 peak hour turning movement traffic count volumes, the volumes balance fairly well with the (grown) counts at Forestville Road / Old Milburnie Road (conducted in late 2018).

I want to make sure everyone agrees with the methodology discussed prior to proceeding forward with the study. Thoughts?

Thank You!

Intersection Summary			
Area Type:	Other		
Cycle Length: 160			
Actuated Cycle Length: 160			
Natural Cycle: 150			
Control Type: Actuated-Uncoordinated			
Maximum v/c Ratio: 6.93			
Intersection Signal Delay: 1233.5		Intersection LOS: F	
Intersection Capacity Utilization 200.9%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Forestville Road & Buffaloe Road

Intersection Summary

Area Type: Other
Cycle Length: 190
Actuated Cycle Length: 136.5
Natural Cycle: 120
Control Type: Actuated-Uncoordinated
Maximum v/c Ratio: 1.19
Intersection Signal Delay: 37.0 Intersection LOS: D
Intersection Capacity Utilization 85.2% ICU Level of Service E
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Forestville Road & Buffaloe Road

Intersection Summary

Area Type: Other
Cycle Length: 190
Actuated Cycle Length: 113.6
Natural Cycle: 90
Control Type: Actuated-Uncoordinated
Maximum v/c Ratio: 0.82
Intersection Signal Delay: 27.8 Intersection LOS: C
Intersection Capacity Utilization 72.8% ICU Level of Service C
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Milburnie Road & US 64 Business

Intersection Summary

Area Type: Other
Cycle Length: 190
Actuated Cycle Length: 143.3
Natural Cycle: 150
Control Type: Actuated-Uncoordinated
Maximum v/c Ratio: 1.61
Intersection Signal Delay: 59.1 Intersection LOS: E
Intersection Capacity Utilization 93.3% ICU Level of Service F
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary			
Area Type:	Other		
Cycle Length: 150			
Actuated Cycle Length: 150			
Natural Cycle: 150			
Control Type: Actuated-Uncoordinated			
Maximum v/c Ratio: 2.61			
Intersection Signal Delay: 506.5		Intersection LOS: F	
Intersection Capacity Utilization 208.1%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Forestville Road & Buffaloe Road

Intersection Summary

Area Type: Other
Cycle Length: 190
Actuated Cycle Length: 157.1
Natural Cycle: 150
Control Type: Actuated-Uncoordinated
Maximum v/c Ratio: 1.22
Intersection Signal Delay: 46.6 Intersection LOS: D
Intersection Capacity Utilization 90.4% ICU Level of Service E
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 8: Old Milburnie Road & US 64 Business

See Note 9

4 Phase
Fully Actuated
(Raleigh Signal System)

NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2018 and "Standard Specifications for Roads and Structures" dated January 2018.
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Reposition existing signal head 41.
4. Phase 5 may be lagged.
5. Phase 3 may be lagged.
6. Set all detector units to presence mode.
7. The Division (City) Traffic Engineer will determine the hours of use for each phasing plan.
8. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.
9. Blankout sign B shall only illuminate during phase 6 and after 5 seconds of steady activation on loop 6C. The sign shall extinguish when there is no longer detection on loop 6C or phase 6 green termination.

4 Phase
Fully Actuated
(Raleigh Signal System)

NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2018 and "Standard Specifications for Roads and Structures" dated January 2018.
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Reposition existing signal heads 22, 81, and 82.
4. Phase 5 may be lagged.
5. Phase 3 may be lagged.
6. Set all detector units to presence mode.
7. Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
8. The Division (City) Traffic Engineer will determine the hours of use for each phasing plan.
9. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.

Fully Actuated
US 64 Bus. (Knightdale) CLS
Signal System #: D05-28_Knightdale

NOTES

1. Refer to "Roadway Standard Drawings NCDOT" dated January 2018 and "Standard Specifications for Roads and Structures" dated January 2018, and all applicable sections of the latest version of the generic Project Special Provisions. The PSP can be accessed at the following website: https://connect.ncdot.gov/resources/safety/pages/ITS-Design-Resources.aspx
2. Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
3. Phase 1 and/or phase 5 may be lagged.
4. The order of phase 3 and phase 4 may be reversed.
5. Set all detector units to presence mode.
6. Omit "WALK" and flashing "DON'T WALK" with no pedestrian calls.
7. Program pedestrian heads to countdown the flashing "Don't Walk" time only.
8. In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
9. Maximum times shown in timing chart are for free-run operation only. Coordinated signal system timing values supersede these values.
10. Reposition existing signal heads 41 and 42.
11. The Division Traffic Engineer will determine the hours of use for each phasing plan.
12. Closed loop sustem data: Controller Asset #: 1330.

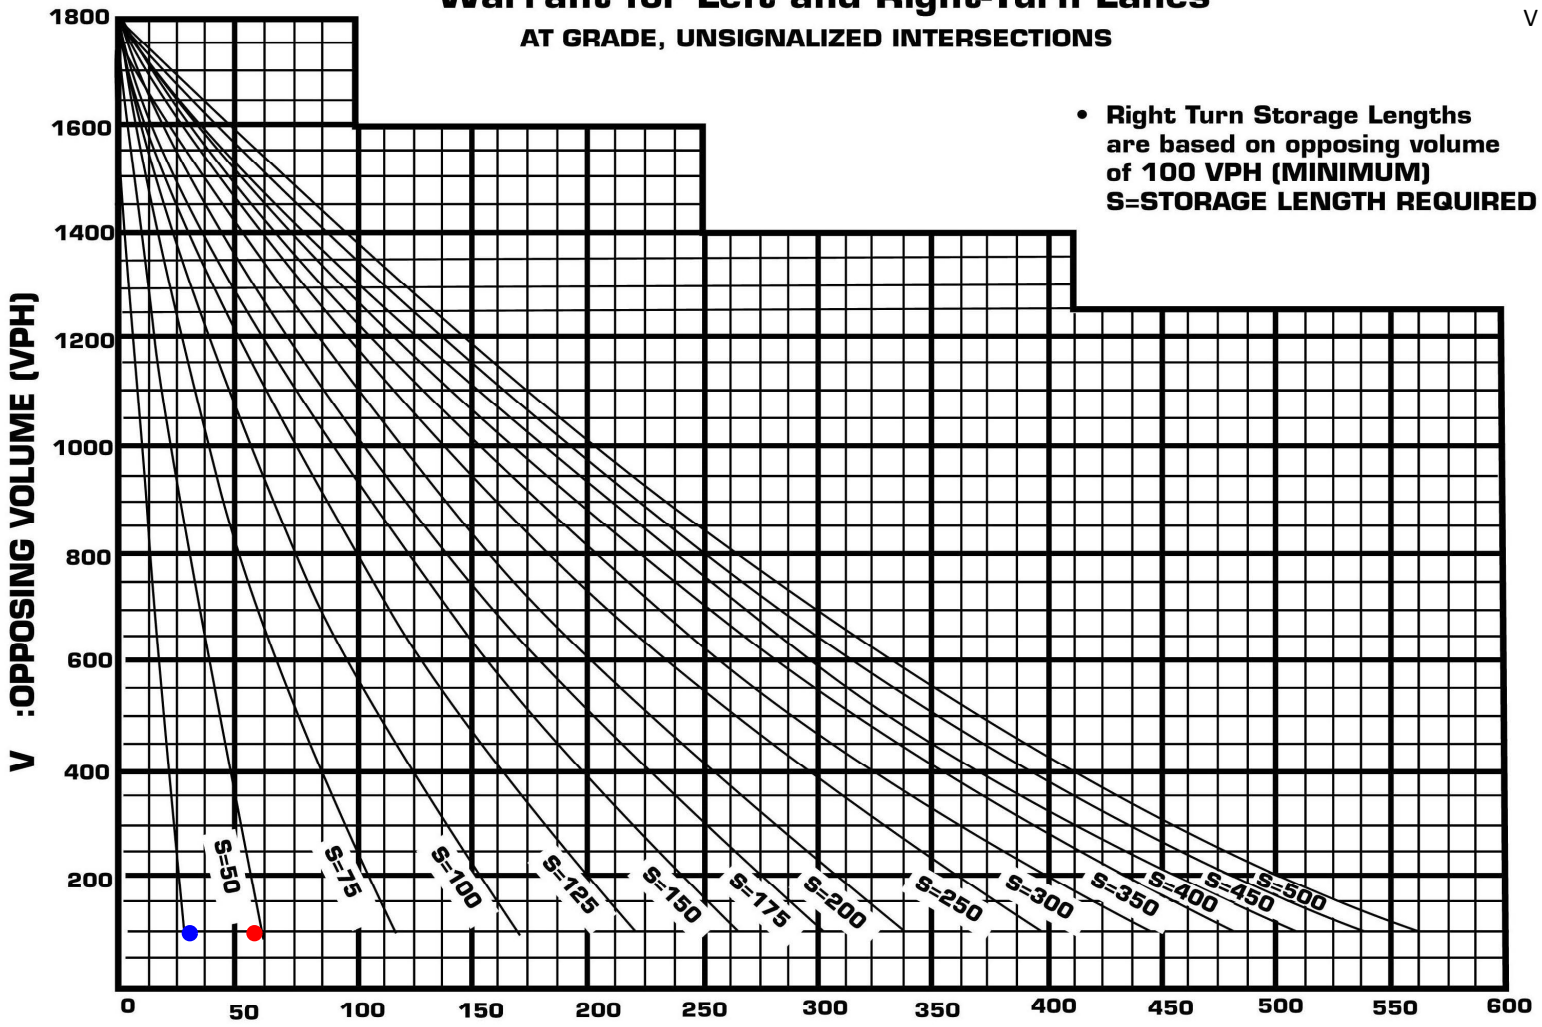
Appendix E – NCDOT Nomographs

AM Peak Hour
VL = 31
V = 100
PM Peak Hour
VL = 59
V = 10

Warrant for Left and Right-Turn Lanes

AT GRADE, UNSIGNALIZED INTERSECTIONS



- **Right Turn Storage Lengths are based on opposing volume of 100 VPH (MINIMUM)**
- **S=STORAGE LENGTH REQUIRED**

V_L: LEFT TURNING VOLUME (VPH)
V_R: RIGHT TURNING VOLUME (VPH)

Note: Where adjacent signalization may provide opportunities for gaps in the traffic stream a reduction in the above storage values can be considered on a case by case basis.
