1 INTRODUCTION

This report presents the proposed Haven at Griffith Meadows** residential development traffic impact analysis (TIA) findings. The development will be located on the northern side of Poole Road in Knightdale, NC (see **Figure 1-1**) and will consist of 191 single-family residential units. To cover any potential site plan updates, 200 single-family residential units were analyzed in this study.

** The subject TIA was originally named “Poole Road Martin.” All project figures and appendices include the “Poole Road Martin” project name.

The proposed development is planned for construction in 2025. Per Town of Knightdale standards / guidelines, analyses were completed for the 2022 Existing traffic volumes, 2026 Background traffic volumes (2025 Build + 1 year), 2026 Build traffic volumes (Background + site trips), and 2035 Horizon Year traffic volumes (2025 Build + 10 years). At the Town’s request, additional vehicular capacity analyses were provided for the 2026 Background and Build traffic volumes including non-approved area developments.

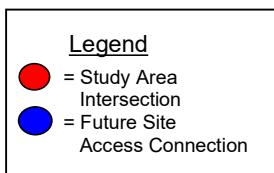

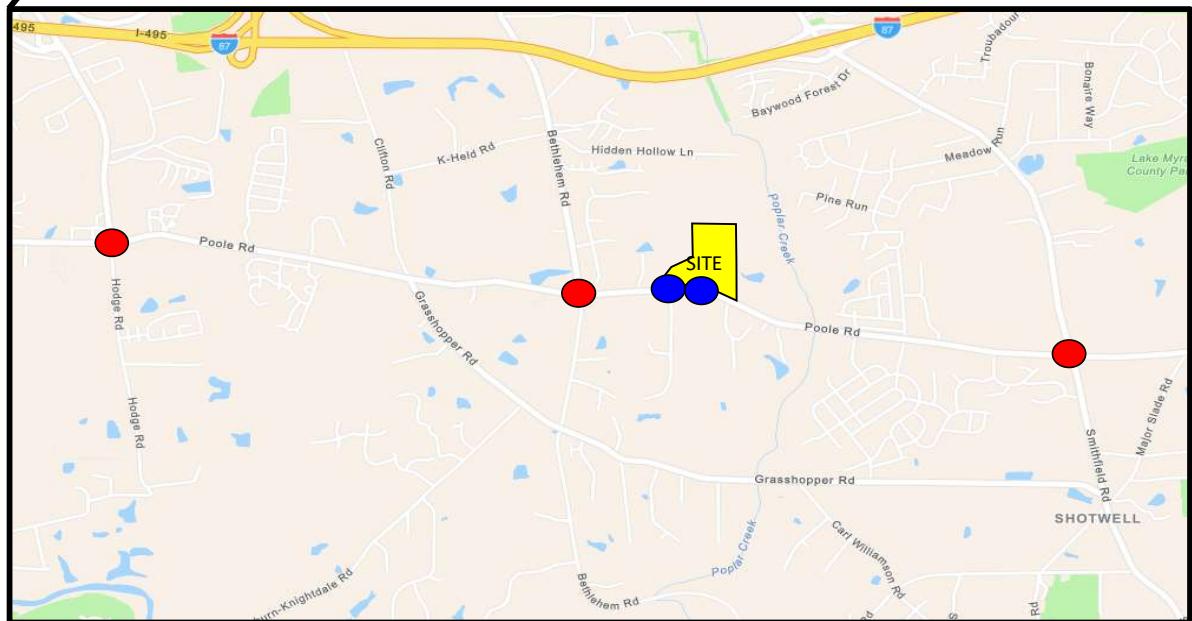

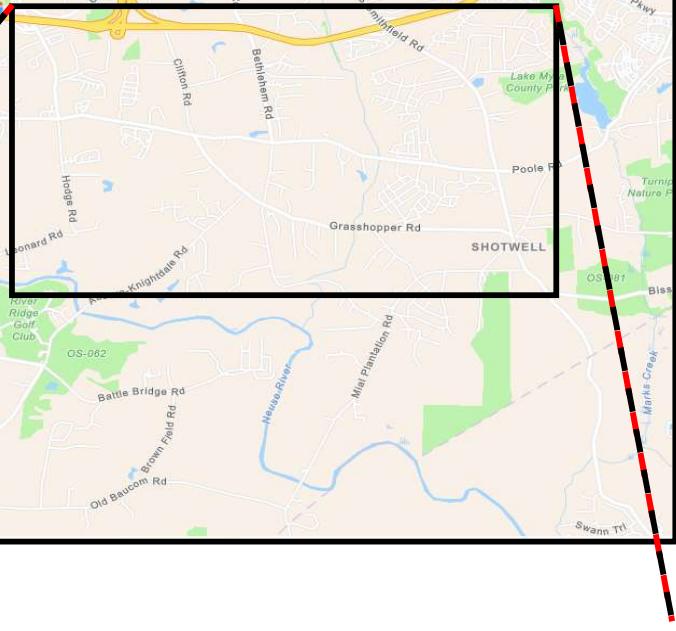

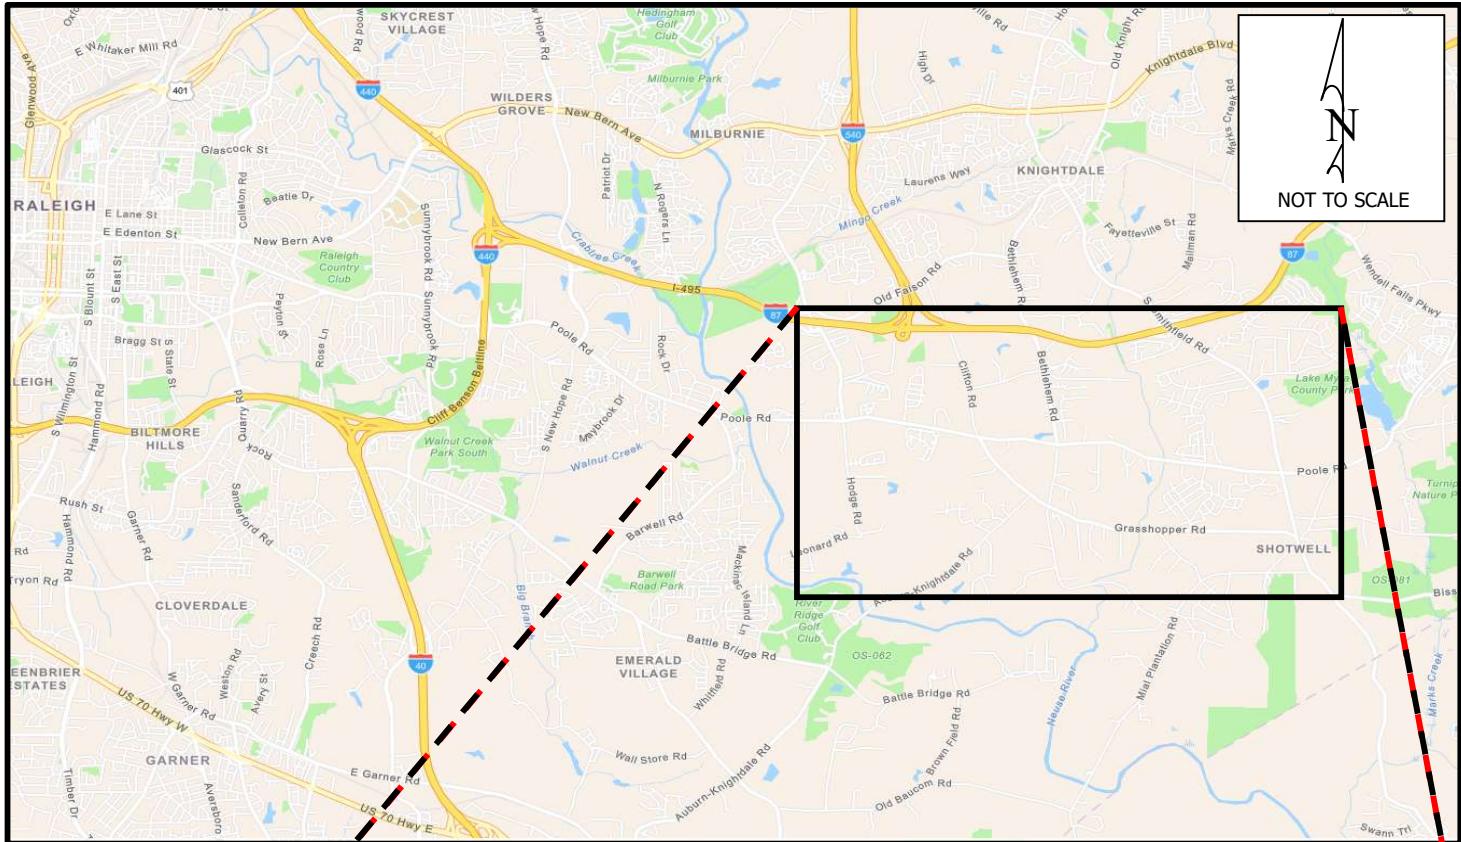

The purpose of this assessment is as follows:

1. Verify that the existing geometry provided within the study area is sufficient to accommodate the projected traffic volumes; and
2. Determine what, if any, improvements are necessary at the proposed site access connections to the subject development.

The following steps were taken to determine the potential traffic impacts associated with this project:

1. Data Collection – AM (7:00 – 9:00) and PM (4:00 – 6:00) peak period turning movement counts were collected in March 2022 at the following signalized intersections:
 - SR-1007 (Poole Road) / SR-2516 (Hodge Road);
 - SR-1007 (Poole Road) / SR-2049 (Bethlehem Road); and
 - SR-1007 (Poole Road) / SR-2233 (Smithfield Road).
2. Trip Generation/Future Traffic – Traffic generated by the proposed development was estimated using the 10th Edition of the Institute of Transportation Engineers’ Trip Generation Manual. Trip generation was calculated following the NCDOT trip generation standards and practices. Projected traffic volumes were calculated using a 3% ambient growth rate through 2026, and a 1% ambient growth rate between 2026 and 2035. Per the scoping document (see **Appendix A**), trips from the approved Poole Road Apartments Development were included with all future traffic.
3. Trip Distribution and Projections – The site-generated trip distribution was based on the existing area traffic distribution, direction from the Town of Knightdale, and Engineering judgement.
4. Traffic Capacity Analysis – Level of service analyses were performed using SYNCHRO Version 10.3 for the following intersections:
 - SR-1007 (Poole Road) / SR-2516 (Hodge Road);
 - SR-1007 (Poole Road) / SR-2049 (Bethlehem Road);
 - SR-1007 (Poole Road) / Site Access 1;
 - SR-1007 (Poole Road) / Site Access 2; and
 - SR-1007 (Poole Road) / SR-2233 (Smithfield Road).

5. Review of Proposed Improvements – Roadway improvements proposed to accommodate projected site-generated traffic were evaluated.

2 EXISTING INFORMATION

The proposed development will be located on the northern side of Poole Road in Knightdale, NC, as shown in **Figure 1-1**.

2.1 STUDY LIMITS

Access to the proposed site will be provided via two full movement site accesses to Poole Road. Site Access 1 will be located approximately 1,730 feet east of Bethlehem Road. Site Access 2 will be located approximately 875 feet east of Site Access 1.

The entrances are shown graphically in **Figure 1-1** and on the preliminary proposed development site layout in **Figure 2-1** (all figures are located at the end of their respective chapter).

The study limits include the following five (5) intersections:

- SR-1007 (Poole Road) / SR-2516 (Hodge Road);
- SR-1007 (Poole Road) / SR-2049 (Bethlehem Road);
- SR-1007 (Poole Road) / Site Access 1;
- SR-1007 (Poole Road) / Site Access 2; and
- SR-1007 (Poole Road) / SR-2233 (Smithfield Road).

2.2 EXISTING ROADWAYS

SR-1007 (Poole Road) is a two-lane undivided facility that runs approximately east-west in the project study area. The facility is classified as a minor arterial and has a posted 45-mph speed limit west of Grasshopper Road and 55-mph east of Grasshopper Road. Locally, Poole Road connects to New Bern Road in the west and to Wendell Falls Parkway in the east. Per 2020 NCDOT Average Annual Daily Traffic (AADT) count maps, Poole Road carries 4,000 vehicles per day (VPD) west of Smithfield Road.

SR-2516 (Hodge Road) is a two-lane undivided facility that runs approximately north-south in the project study area. The facility has a posted 45-mph speed limit north of Poole Road and 35-mph south of Poole Road. The facility, classified as a major collector north of Poole Road and local road south of Poole Road, primarily services residential land uses in the project study area. Per 2020 NCDOT AADT count maps, Hodge Road carries 13,500 VPD north of Poole Road.

SR-2049 (Bethlehem Road) is a two-lane undivided facility that runs approximately north-south in the project study area. The facility, classified as a major collector north of Poole Road and local road south of Poole Road, has a posted 45-mph speed limit. Per 2020 NCDOT AADT count maps, Bethlehem Road carries 4,900 VPD north of Poole Road.

SR-2233 (Smithfield Road) is a two-lane undivided facility that runs approximately north-south in the project study area. The facility is classified as a minor arterial north of Poole Road and a major collector south of Poole Road, and has a posted 55-mph speed limit. Per 2017 NCDOT AADT count maps, Poole Road carries 14,000 VPD north of Poole Road.

2.3 EXISTING INTERSECTIONS

Using available aerial imagery and site visits, Timmons Group compiled the existing geometry for each study area intersection. The existing intersection geometry is shown in **Figure 2-2**.

Poole Road / Hodge Road is a three-phase signalized intersection with protected-permitted eastbound left-turn phasing. The north, east, and westbound approaches consist of an exclusive left-turn lane and a shared through / right-turn lane. The southbound approach consists of an exclusive left-turn lane, a single through lane and an exclusive right-turn lane.

Poole Road / Bethlehem Drive is a two-phase signalized intersection. All four (4) approaches consist of a shared left-turn / through / right-turn lane.

Poole Road / Smithfield Road is a two-phase signalized intersection. All four (4) approaches consist of a shared left-turn / through / right-turn lane.

2.4 TRAFFIC VOLUMES

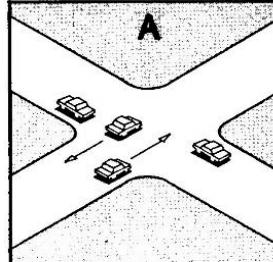

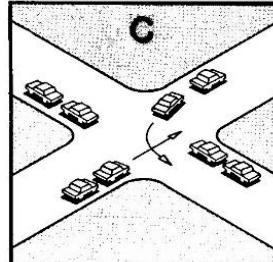

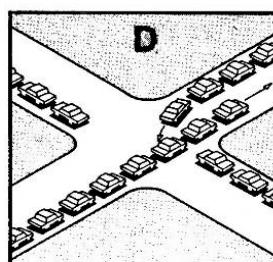

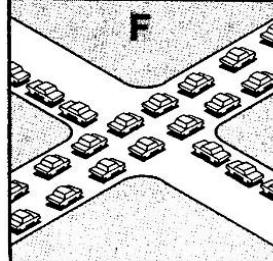

Timmons Group calculated peak hour volumes for the study area intersections using the AM (7:00 – 9:00) and PM (4:00 – 6:00) peak period turning movement counts undertaken in March 2022. Turning movement traffic count data is summarized in **Figure 2-3**. The complete traffic count data can be found in **Appendix B**.

2.5 CAPACITY ANALYSIS

Using field observations, aerial photography, and traffic count data, traffic operations were analyzed during 2022 (existing), 2026 (without and with the proposed development site trips), and 2035 (horizon year).

Capacity analysis allows traffic engineers to determine the impacts of traffic on the surrounding roadway network. The Transportation Research Board's (TRB) *Highway Capacity Manual* (HCM) methodologies govern how the capacity analyses are conducted and how the results are interpreted. There are six letter grades of Levels of Service (LOS) from A to F, with LOS A representing the best operating conditions and LOS F the worst operating conditions. At signalized intersections, an overall intersection LOS E is generally considered unacceptable. At unsignalized intersections, a LOS E is generally considered acceptable only if the side street encounters delay. Nevertheless, side streets typically function at a LOS F during peak traffic periods, because the traffic volumes often do not warrant a traffic signal to assist side street traffic. **Table 2-1** shows in detail how each of these levels of service are interpreted.

Table 2-1: Level of Service Definitions

Level of Service	Roadway Segments or Controlled Access Highways	Intersections	
A	Free flow, low traffic density.	No vehicle waits longer than one signal indication.	
B	Delay is not unreasonable, stable traffic flow.	On a rare occasion motorists wait through more than one signal indication.	
C	Stable condition, movements somewhat restricted due to higher volumes, but not objectionable for motorists.	Intermittently drivers wait through more than one signal indication, and occasionally backups may develop behind left turning vehicles, traffic flow still stable and acceptable.	
D	Movements more restricted, queues and delays may occur during short peaks, but lower demands occur often enough to permit clearing, thus preventing excessive backups.	Delays at intersections may become extensive with some, especially left-turning vehicles waiting two or more signal indications, but enough cycles with lower demand occur to permit periodic clearance, thus preventing excessive backups.	
E	Actual capacity of the roadway involves delay to all motorists due to congestion.	Very long queues may create lengthy delays, especially for left-turning vehicles.	
F	Forced flow with demand volumes greater than capacity resulting in complete congestion. Volumes drop to zero in extreme cases.	Backups from locations downstream restrict or prevent movement of vehicles out of approach creating a storage area during part or all of an hour.	

SOURCE: "A Policy on Design of Urban Highways and Arterial Streets" - AASHTO, 1973 based upon material published in "Highway Capacity Manual", National Academy of Sciences, 1965.

For signalized and unsignalized intersections, level of service is defined in terms of **delay**, a measure of driver discomfort, frustration, fuel consumption and lost travel time. **Table 2-2** summarizes the delay associated with each LOS category:

Table 2-2: Signalized and Unsignalized Intersection Level of Service Criteria

Signalized Intersections		Unsignalized Intersections	
Level of Service	Control Delay per Vehicle (sec/veh)	Level of Service	Average Control Delay (sec/veh)
A	≤ 10	A	0 to 10
B	> 10 to ≤ 20	B	> 10 to ≤ 15
C	> 20 to ≤ 35	C	> 15 to ≤ 25
D	> 35 to ≤ 55	D	> 25 to ≤ 35
E	> 55 to ≤ 80	E	> 35 to ≤ 50
F	> 80	F	> 50

*Source: Exhibit 16-2 and Exhibit 17-2 from
TRB's "Highway Capacity Manual 2000"*

Capacity analyses were performed to assess operational conditions. Study area intersections were analyzed using SYNCHRO Version 10.3 based on Highway Capacity Manual (HCM) methodologies with the following assumptions:

- Existing grades;
- 12-foot lane widths;
- No parking activity, bus stops, or pedestrians;
- Peak hour factor (PHF) of 0.90;
- Heavy vehicle percentages 2%;
- Minimum 4 vehicles per hour (VPH) for all allowed permissible movements; and
- Existing signal data found in the provided traffic signal plans (see **Appendix C**);

POOLE ROAD

Preliminary Concept Sketch - April 20, 2022

3 EXISTING AND BACKGROUND CONDITIONS AND ANALYSIS

3.1 2022 EXISTING ANALYSES

Table 3-1 summarizes the 2022 Existing intersection LOS and delay based on the geometry shown in **Figure 2-2** and the 2022 Existing traffic volumes shown in **Figure 2-3**. The corresponding SYNCHRO output is included in **Appendix D**.

The signalized intersection of Hodge Road / Poole Road is currently operating at a LOS C and LOS E during the 2022 Existing AM and PM peak hours, respectively. The southbound intersection approach is currently operating unacceptably during the PM peak hour. All other intersection approaches are currently operating at a LOS D or better during both peak hours.

The signalized intersection of Bethlehem Road / Poole Road is currently operating at a LOS B and LOS C during the 2022 Existing AM and PM peak hours, respectively. The southbound intersection approach is currently operating unacceptably during the PM peak hour. All other intersection approaches are currently operating at a LOS C or better during both peak hours.

The signalized intersection of Smithfield Road / Poole Road is currently operating at a LOS C during both 2022 Existing peak hours. The eastbound intersection approach is currently operating unacceptably during the PM peak hour. All other intersection approaches are currently operating at a LOS D or better during both peak hours.

**Table 3-1: Intersection Level of Service and Delay Summary
2022 Existing Traffic Volumes**

Intersection	Movement and Approach	AM PEAK HOUR		PM PEAK HOUR	
		Delay ¹ (sec/veh)	LOS ¹	Delay ¹ (sec/veh)	LOS ¹
1: Hodge Rd & Poole Rd	EB Approach	19.4	B	14.3	B
	WB Approach	34.3	C	33.6	C
	NB Approach	43.4	D	16.5	B
	SB Approach	47.1	D	115.0	F
	Overall	34.7	C	67.6	E
2: Bethlehem Rd & Poole Rd	EB Approach	6.5	A	9.3	A
	WB Approach	11.3	B	8.0	A
	NB Approach	23.7	C	14.4	B
	SB Approach	18.9	B	59.2	E
	Overall	16.1	B	27.9	C
5: Smithfield Rd & Poole Rd	EB Approach	55.0	D	55.9	E
	WB Approach	47.1	D	38.6	D
	NB Approach	27.3	C	13.3	B
	SB Approach	10.3	B	25.5	C
	Overall	28.6	C	27.7	C

¹ Overall intersection LOS and delay reported for signalized intersections and roundabouts only.

** Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for signalized intersections.

+ Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for unsignalized intersections.

SYNCHRO does not provide level of service or delay for unsignalized movements with no conflicting volumes.

3.2 2026 BACKGROUND TRAFFIC VOLUMES

Figure 3-1 and **Figure 3-2** show the 2026 and 2035 ambient traffic volumes, respectively, calculated using a 3% ambient growth rate through 2026 and a 1% ambient growth rate between 2026 to 2035.

Currently there is one (1) approved development in the project study area that will be fully build-out by 2026: Poole Road Apartment Development (see **Appendix E**). Listed below are the site trip distribution assumptions, and proposed offsite improvements.

- Poole Road Apartment Development TIA
 - TIA completed by Davenport – Sealed 10/20/21
 - Located in the northwest quadrant of Hodge Road / Poole Road intersection
 - Assumed to be fully constructed in 2023
 - 364 Multi-Family Housing (apartments) and 30 Multi-Family Housing (townhomes)
 - No off-site intersection improvements recommended
 - Trip Distribution assumed to follow patterns found in the Poole Road Apartment Development TIA (see **Appendix E**) and Engineering judgement

Projected and distributed trips from the approved area development (see **Appendix E**) are located in **Figure 3-3**. These trips were added to the 2026 ambient volumes (**Figure 3-1**) to determine the 2026 Background traffic volumes (see **Figure 3-4**).

Additionally, there is a public improvement project (HL-0031) that will widen the intersection of Poole Road / Smithfield Road. Left-turn lanes will be constructed on all four (4) intersection approaches. The project will be constructed by 2023 (see **Appendix F**). These improvements were included in all future year analyses.

3.3 2026 BACKGROUND ANALYSIS

Table 3-2 summarizes the 2026 Background intersection LOS and delay based on the geometry shown in **Figure 2-2** (including HL-0031 improvements) and the 2026 Background traffic volumes shown in **Figure 3-4**. The corresponding SYNCHRO output is included in **Appendix D**.

The signalized intersection of Hodge Road / Poole Road is projected to operate at a LOS D and LOS F during the 2026 Background AM and PM peak hours, respectively. The southbound intersection approach is projected to operate unacceptably at LOS E and LOS F during the AM and PM peak hours, respectively. The eastbound intersection approach is projected to operate unacceptably during the AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

The signalized intersection of Bethlehem Road / Poole Road is projected to operate at a LOS C and LOS D during the 2026 Background AM and PM peak hours, respectively. The southbound intersection approach is projected to operate unacceptably during the PM peak hour. All other intersection approaches are projected to operate at a LOS C or better during both peak hours.

The signalized intersection of Smithfield Road / Poole Road is projected to operate at a LOS C during both 2026 Background peak hours. The eastbound intersection approach is projected to operate unacceptably at LOS E during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

**Table 3-2: Intersection Level of Service and Delay Summary
2026 Background Traffic Volumes**

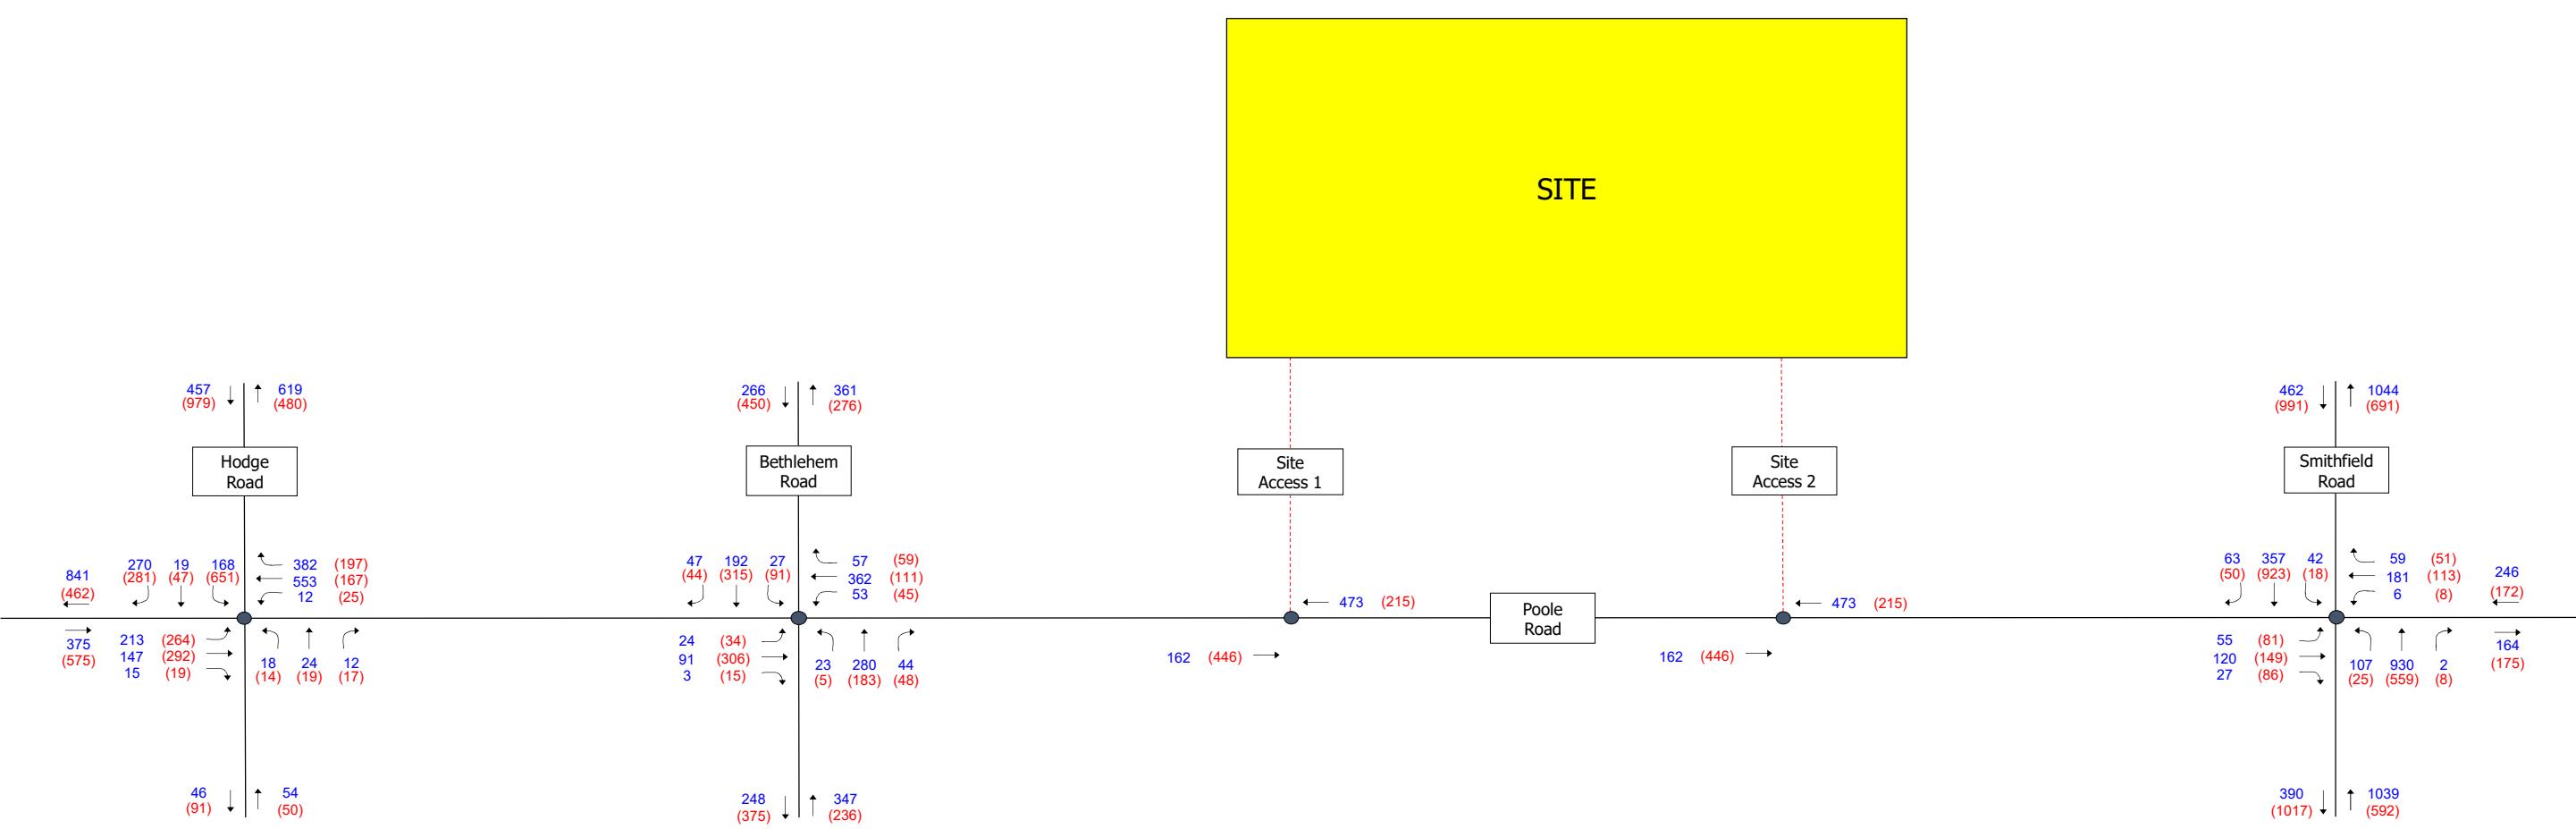

Intersection	Movement and Approach	AM PEAK HOUR		PM PEAK HOUR	
		Delay ¹ (sec/veh)	LOS ¹	Delay ¹ (sec/veh)	LOS ¹
1: Hodge Rd & Poole Rd	EB Approach	60.7	E	16.5	B
	WB Approach	41.5	D	34.3	C
	NB Approach	47.0	D	18.0	B
	SB Approach	58.0	E	181.1	F
	Overall	49.7	D	100.7	F
2: Bethlehem Rd & Poole Rd	EB Approach	6.4	A	10.2	B
	WB Approach	12.2	B	8.5	A
	NB Approach	32.8	C	15.5	B
	SB Approach	25.0	C	101.4	F
	Overall	20.4	C	43.4	D
5: Smithfield Rd & Poole Rd	EB Approach	32.6	C	62.0	E
	WB Approach	38.0	D	45.1	D
	NB Approach	22.7	C	8.6	A
	SB Approach	19.0	B	33.8	C
	Overall	24.8	C	31.9	C

¹ Overall intersection LOS and delay reported for signalized intersections and roundabouts only.

** Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for signalized intersections.

+ Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for unsignalized intersections.

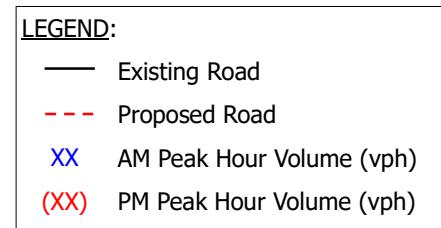

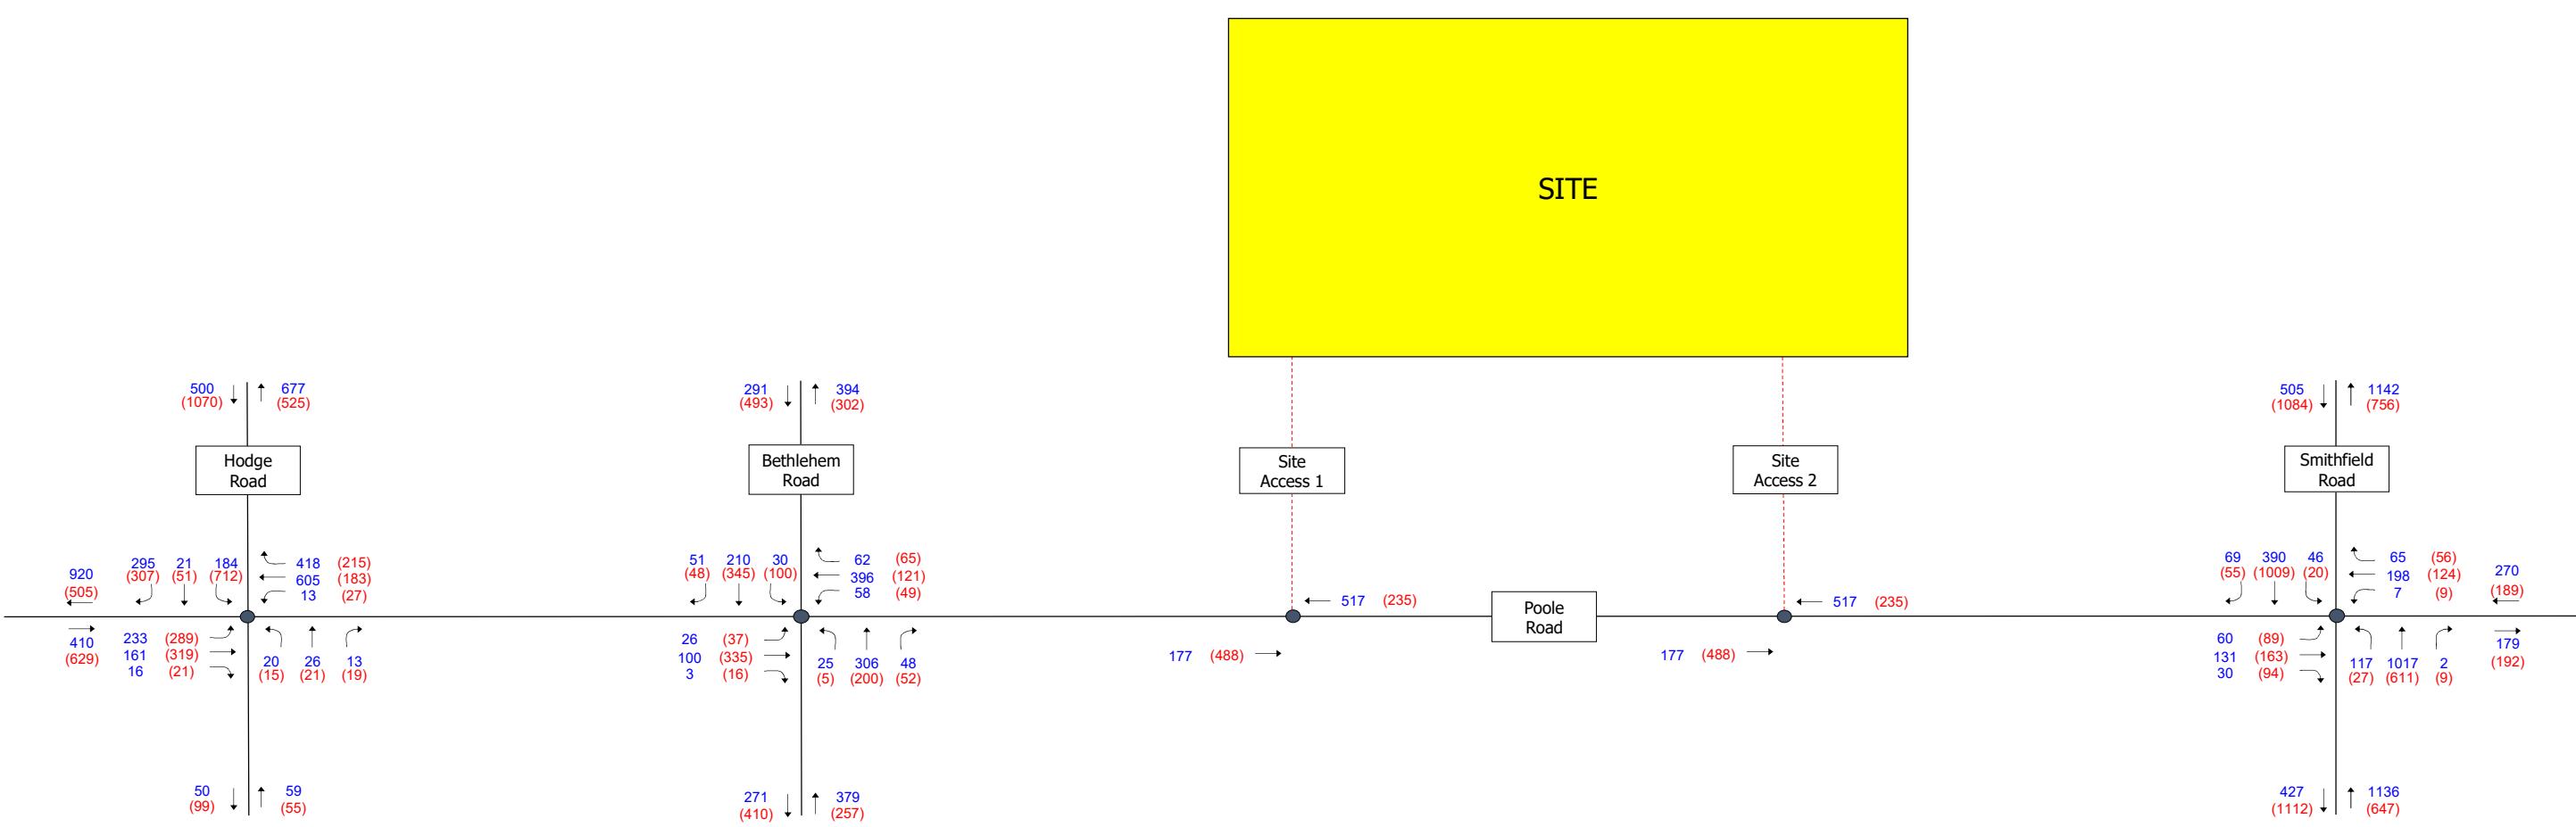

SYNCHRO does not provide level of service or delay for unsignalized movements with no conflicting volumes.

4 SITE TRIP GENERATION AND DISTRIBUTION

The subject residential development site trips were estimated based on the proposed land use supplied by the developer and subsequently distributed onto the surrounding roadway network.

4.1 TRIP GENERATION

The site-generated trips shown in **Table 4-1** are based on trip generation information provided in the 10th Edition of the Institute of Transportation Engineers' (ITE's) *Trip Generation Manual* and the anticipated residential development. The trip generation was calculated using the proposed number of residential units as the independent variable. The provided equation was used to help generate trips (per NCDOT standards).

Table 4-1: Trip Generation Summary

ITE Land Use Code	Independent Variable	Daily Traffic	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
210 – Single-Family Detached Housing	200 Units	1,967	37	110	147	125	73	198

SOURCE: Institute of Transportation Engineers' *Trip Generation Manual* 10th Edition (2017)

AM peak hour trips generated totaled 37 incoming and 110 outgoing where PM peak hour trips totaled 125 incoming and 73 outgoing. Average daily traffic (ADT) volumes generated by the development totaled 1,967 VPD. No reduction in trips was included due to internal capture and/or pass-by trips.

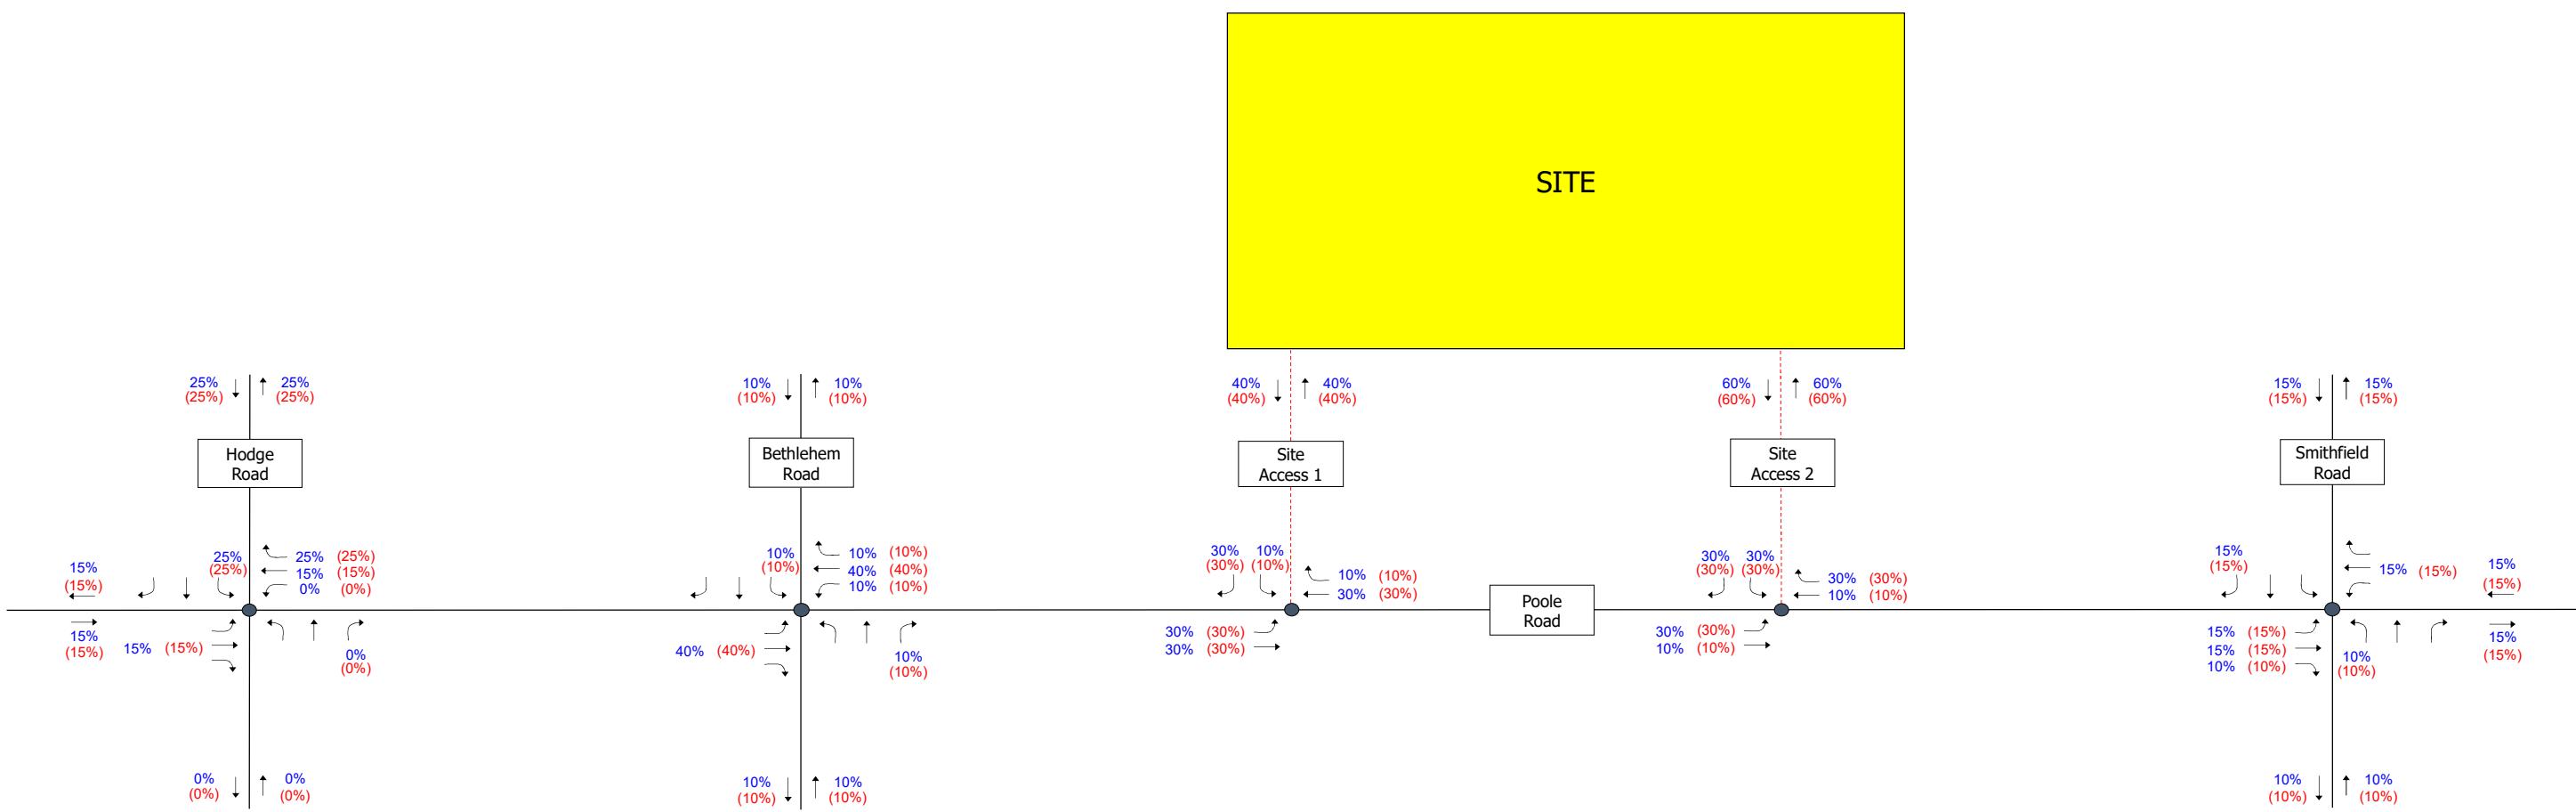

4.2 TRIP DISTRIBUTION

The directional traffic patterns, or site trip distribution, was determined using the existing AM and PM peak hour traffic characteristics of the surrounding traffic network, discussions during the scoping meeting, and Engineering judgement. Total trips into and out of the study area using Poole Road, Hodge Road, Bethlehem Road, and Smithfield Road form the basis for the percentage distribution. The percentages were routed, via shortest path, to and from the proposed development. The distribution percentages were then applied to the generated trips to predict routes and project 2026 Build traffic volumes.

Figure 4-1 shows the trip distribution percentages and **Figure 4-2** shows the trip distribution volumes. 2026 Build traffic volumes were determined by adding the total trip distribution volumes (**Figure 4-2**) to the 2026 Background traffic volumes (see **Figure 3-4**).

5 2026 BUILD CONDITION AND ANALYSIS

To complete the 2026 Build analyses (including proposed development site traffic), the estimated site trips were added to the 2026 Background traffic volumes. The projected total volumes, along with the existing intersection geometry, were used to complete the capacity analyses.

5.1 2026 BUILD TRAFFIC VOLUMES

Background traffic volumes (**Figure 3-4**) were added to the projected residential development site trips (**Figure 4-2**) to generate the 2026 Build traffic volumes (background + site) shown in **Figure 5-1**.

To summarize, the 2026 Build traffic volumes (**Figure 5-1**) contain the following:

- 2022 traffic volumes grown exponentially for 4 years at a 3% ambient growth rate (**Figure 3-1**);
- Area approved development site trips (**Figure 3-3**); and
- Total site trips generated by the subject development (see **Figure 4-2**).

5.2 2026 BUILD ANALYSIS

Table 5-1 summarizes the intersection LOS and delay based on the geometry shown in **Figure 2-2** (including HL-0031 improvements) and the 2026 Build traffic volumes shown in **Figure 5-1**. The corresponding SYNCHRO output is included in **Appendix D**.

The signalized intersection of Hodge Road / Poole Road is projected to operate at a LOS E and LOS F during the 2026 Build AM and PM peak hours, respectively. The southbound intersection approach is projected to operate unacceptably at LOS E and LOS F during the AM and PM peak hours, respectively. The eastbound intersection approach is projected to operate unacceptably at LOS F during the AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours. To improve intersection operations, construction of a westbound right-turn lane or an additional southbound left-turn lane were considered. However, these improvements are not feasible due to right-of-way constraints and the location of the convenience store in the northeast corner of the intersection. Instead, the traffic signal phasing at the intersection should be modified to provide for a southbound left-turn protected/permissive phase. **Table 5-2** shows the resulting LOS after the improvements. As shown in **Table 5-2**, following the construction of this improvement, several signalized intersection approaches are still projected to operate unacceptably during both peak hours. However, the overall intersection LOS improved from LOS F to LOS E for the PM peak hour.

The signalized intersection of Bethlehem Road / Poole Road is projected to operate at a LOS C and LOS D during the 2026 Build AM and PM peak hours, respectively. The southbound intersection approach is projected to operate unacceptably at LOS F during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours. To improve intersection operations, consideration should be given to optimizing the traffic signal timings. Because the intersection is projected to operate acceptably overall during both peak hours, no improvements are recommended at this intersection.

All Poole Road / Site Access 1 unsignalized intersection approaches are projected to operate at a LOS B or better during both 2026 Build peak hours. Per the NCDOT Policy on Street and Driveway Access to North Carolina Highways Manual:

"Generally left and right turn lanes and tapers shall be considered when:

- *In accordance with G.S. 137-18(29), the average daily traffic meets or exceeds 4,000 vehicles per day on any secondary route (the average daily traffic should include both the existing traffic plus traffic generated by the proposed development)"*

With the addition of proposed development site traffic, the 2026 AADT along Poole Road is projected to exceed 4,000 VPD. Because of this, turn lanes were considered at Site Access 1. Per the NCDOT Nomograph (see **Appendix G**) and projected 2026 peak hour volumes, a 50-foot eastbound left-turn lane (with appropriate taper) is recommended. Per **Table 5-2**, following this improvement, all approaches are projected to continue to operate acceptably. No additional improvements are recommended at this intersection due to the proposed development's construction.

All Poole Road / Site Access 2 unsignalized intersection approaches are project to operate at a LOS C or better during both 2026 Build peak hours. Because the 2026 AADT along Poole Road is projected to exceed 4,000 VPD, turn lanes were considered at Site Access 2. Per the NCDOT Nomograph (see **Appendix G**) and projected 2026 peak hour volumes, a 50-foot eastbound left-turn lane (with appropriate taper) is recommended. A 50-foot westbound right-turn lane (with appropriate taper) is also recommended. Per **Table 5-2**, following these improvements, all approaches are projected to continue to operate acceptably. No additional improvements are recommended at this intersection due to the proposed development's construction.

The signalized intersection of Smithfield Road / Poole Road is projected to operate at a LOS C and LOS D during the 2026 Build AM and PM peak hours, respectively. The eastbound intersection approach is projected to operate unacceptably at LOS E during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours. Because the intersection is projected to operate acceptably overall and the proposed turn lanes will be able to handle the projected queues during both peak hours, no improvements are recommended at this intersection.

**Table 5-1: Intersection Level of Service and Delay Summary
2026 Build Traffic Volumes**

Intersection	Movement and Approach	AM PEAK HOUR		PM PEAK HOUR	
		Delay ¹ (sec/veh)	LOS ¹	Delay ¹ (sec/veh)	LOS ¹

** Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for signalized intersections.

+ Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for unsignalized intersections.

SYNCHRO does not provide level of service or delay for unsignalized movements with no conflicting volumes.

5.3 2035 BUILD ANALYSIS

To complete the 2035 Horizon Year analyses (including the proposed development), the 2022 Existing traffic volumes were grown at a 3% ambient growth rate from 2022 to 2026 and a 1% ambient growth rate from 2026 to 2035, and added to the estimated site trips. The projected total volumes, along with the proposed intersection geometry (see **Figure 7-1**), were used to complete the capacity analyses.

The 2035 Build traffic volumes shown on **Figure 5-2** contain the following:

- Existing 2022 turning movement traffic count volumes grown at a 3% ambient growth rate from 2022 to 2026 and a 1% ambient growth rate from 2026 to 2035 (**Figure 3-2**);
- Area approved development site trips (**Figure 3-3**); and
- Total site trips generated by the subject development (**Figure 4-2**).

Table 5-3 summarizes the intersection LOS and Delay based on the 2035 Build Year traffic volumes (see **Figure 5-2**). The corresponding SYNCHRO output is included in **Appendix D**.

The signalized intersection of Hodge Road / Poole Road is projected to operate at a LOS E during both 2035 Build peak hours. The southbound intersection approach is projected to operate unacceptably at LOS F during both peak hours. The north and westbound intersection approaches are projected to operate unacceptably during both peak hours. The eastbound intersection approach is projected to operate unacceptably during the AM peak hour. All other intersection approaches are projected to operate at a LOS D during both peak hours.

The signalized intersection of Bethlehem Road / Poole Road is projected to operate at a LOS C and LOS E during the 2035 Build AM and PM peak hours, respectively. The southbound intersection approach is projected to operate at LOS F during the PM peak hour. The northbound intersection approach is projected to operate at LOS E during the AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

All Poole Road / Site Access 1 unsignalized intersection approaches are projected to operate at a LOS B or better during both 2035 Build peak hours.

All Poole Road / Site Access 2 unsignalized intersection approaches are project to operate at a LOS C or better during both 2035 Build peak hours.

The signalized intersection of Smithfield Road / Poole Road is projected to operate at a LOS C and LOS D during the 2035 Build AM and PM peak hours, respectively. The eastbound intersection approach is projected to operate at LOS F during the PM peak hour. The westbound intersection approach is projected to operate at LOS E during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

6 BACKGROUND AND BUILD CONDITIONS (NON-APPROVED DEVELOPMENT TRAFFIC)

Per the scoping information (see **Appendix A**), the Town of Knightdale requested that additional analyses be performed for Background and Build Conditions with the addition of non-approved development site traffic. Provided below are these additional analyses.

Currently there are two (2) planned (but not approved) developments in the project study area: Poole at Smithfield Development and Knightdale Assemblage (see **Appendix H**). Listed below are the site trip distribution assumptions, and proposed offsite improvements.

- Poole at Smithfield Development
 - Located in the northeast and northwest Smithfield Road / Poole Road intersection quadrants
 - Assumed to be fully constructed in 2026
 - 354 Single-Family Detached Housing, 326 Multi-Family Housing (townhomes) and 312 Multi-Family Housing (apartments)
 - Trip Distribution assumed to follow patterns based on existing traffic volumes and Engineering judgement (see **Appendix H**)
- Knightdale Assemblage
 - Located on the northern side of Poole Road, east of Smithfield Road
 - Assumed to be fully constructed in 2026
 - 234 Single-Family Detached Housing
 - Trip Distribution assumed to follow patterns based on existing traffic volumes and Engineering judgement (see **Appendix H**)

Projected and distributed trip volumes from the two non-approved area developments (see **Appendix H**) are located in **Figure 6-1**. These trips were added to the 2026 background volumes (**Figure 3-4**) to determine the 2026 Background with Non-Approved Developments traffic volumes (see **Figure 6-2**).

6.1 2026 BACKGROUND ANALYSIS (WITH NON- APPROVED DEVELOPMENT TRAFFIC)

Table 6-1 summarizes the 2026 Background with Non-Approved Developments intersection LOS and delay based on the geometry shown in **Figure 2-2** (including HL-0031 improvements), and the 2026 Background with Non-Approved Developments traffic volumes shown in **Figure 6-2**. The corresponding SYNCHRO output is included in **Appendix D**.

The signalized intersection of Hodge Road / Poole Road is projected to operate at a LOS E and LOS F during the 2026 Background with Non-Approved Developments AM and PM peak hours, respectively. The southbound intersection approach is projected to operate at LOS E and LOS F during the AM and PM peak hours, respectively. The eastbound intersection approach is projected to operate at LOS F during the AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

The signalized intersection of Bethlehem Road / Poole Road is projected to operate at a LOS C and LOS D during the 2026 Background with Non-Approved Developments AM and PM peak hours, respectively. The southbound intersection approach is projected to operate at LOS F during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

The signalized intersection of Smithfield Road / Poole Road is projected to operate at a LOS D during both 2026 Background with Non-Approved Developments peak hours. The eastbound intersection approach is projected to operate at LOS F during the PM peak hour. The westbound intersection approach is projected

to operate at LOS E during both peak hours. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

**Table 6-1: Intersection Level of Service and Delay Summary
2024 Background with Non-Approved Developments Traffic Volumes**

Intersection	Movement and Approach	AM PEAK HOUR		PM PEAK HOUR	
		Delay ¹ (sec/veh)	LOS ¹	Delay ¹ (sec/veh)	LOS ¹
1: Hodge Rd & Poole Rd	EB Approach	87.1	F	17.2	B
	WB Approach	44.4	D	34.8	C
	NB Approach	47.4	D	19.1	B
	SB Approach	62.4	E	192.9	F
	Overall	57.6	E	103.2	F
2: Bethlehem Rd & Poole Rd	EB Approach	6.3	A	11.1	B
	WB Approach	12.9	B	8.8	A
	NB Approach	37.2	D	16.2	B
	SB Approach	27.9	C	107.8	F
	Overall	21.9	C	43.8	D
5: Smithfield Rd & Poole Rd	EB Approach	40.5	D	82.8	F
	WB Approach	57.1	E	67.3	E
	NB Approach	26.4	C	15.4	B
	SB Approach	44.1	D	42.6	D
	Overall	37.5	D	44.5	D

¹ Overall intersection LOS and delay reported for signalized intersections and roundabouts only.

** Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for signalized intersections.

+ Delay greater than 9999.99 seconds cannot be calculated by SYNCHRO for unsignalized intersections.

SYNCHRO does not provide level of service or delay for unsignalized movements with no conflicting volumes.

6.2 2026 BUILD TRAFFIC VOLUMES (WITH NON- APPROVED DEVELOPMENT TRAFFIC)

Background with Non-Approved Development traffic volumes (**Figure 6-2**) were added to the projected residential development site trips (**Figure 4-2**) to generate the 2026 Build with Non-Approved Developments traffic volumes shown in **Figure 6-3**.

To summarize, the 2026 Build with Non-Approved Development traffic volumes (**Figure 6-3**) contain the following:

- 2022 traffic volumes grown exponentially for four (4) years at a 3% ambient growth rate (**Figure 3-1**);
- Area approved development site trips (**Figure 3-3**);
- Total site trips generated by the subject development (**Figure 4-2**); and
- Non-Approved Development trip distribution volumes (**Figure 6-1**).

6.3 2026 BUILD ANALYSIS (NON-APPROVED DEVELOPMENT TRAFFIC)

Table 6-2 summarizes the intersection LOS and delay based on the geometry shown in **Figure 2-2** (including HL-0031 improvements) and the 2026 Build with Non-Approved Development traffic volumes shown in **Figure 6-3**. The corresponding SYNCHRO output is included in **Appendix D**.

The signalized intersection of Hodge Road / Poole Road is projected to operate at a LOS E and LOS F during the 2026 Build with Non-Approved Developments AM and PM peak hours, respectively. The southbound intersection approach is projected to operate at LOS E and LOS F during the AM and PM peak hours, respectively. The eastbound intersection approach is projected to operate at LOS F during the AM peak hour. The westbound intersection approach is projected to operate at LOS E during the AM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

The signalized intersection of Bethlehem Road / Poole Road is projected to operate at a LOS C and LOS D during the 2026 Build with Non-Approved Developments AM and PM peak hours, respectively. The southbound intersection approach is projected to operate at LOS F during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

All Poole Road / Site Access 1 unsignalized intersection approaches are projected to operate at a LOS B or better during both 2026 Build with Non-Approved Developments peak hours.

All Poole Road / Site Access 2 unsignalized intersection approaches are project to operate at a LOS C or better during both 2026 Build with Non-Approved Developments peak hours.

The signalized intersection of Smithfield Road / Poole Road is projected to operate at a LOS D during both 2026 Build with Non-Approved Developments peak hours. The east and westbound intersection approaches are projected to operate unacceptably during the AM and PM peak hours. The southbound intersection approach is projected to operate at LOS E during the PM peak hour. All other intersection approaches are projected to operate at a LOS D or better during both peak hours.

**Table 6-2: Intersection Level of Service and Delay Summary
2026 Build with Non-Approved Developments Traffic Volumes**

7 CONCLUSIONS AND RECOMMENDATIONS

Capacity analyses were performed for the following scenarios:

- 2022 Existing
- 2026 Background (existing + ambient growth + approved development traffic)
- 2026 Build (Background + site trips)
- 2035 Horizon Build (existing + ambient growth + approved development traffic)
- 2026 Background with Non-Approved Development Traffic
- 2026 Build with Non-Approved Development Traffic

In closing, the following improvements (see **Figure 7-1**) are recommended in conjunction with the construction of the proposed development:

- Hodge Road / Poole Road
 - Modify traffic signal phasing to provide for a southbound left-turn protected/permissive phase
- Poole Road / Site Access 1
 - Construction of a 50-foot eastbound left-turn lane (with appropriate taper)
- Poole Road / Site Access 2
 - Construction of a 50-foot eastbound left-turn lane (with appropriate taper)
 - Construction of a 50-foot westbound right-turn lane (with appropriate taper)

Appendix A – Scoping Information

March 30, 2022

Memorandum of Understanding (Poole Road Martin TIA)

TO: Andrew Spiliotis
Senior Planner - Transportation
Development Services
Town of Knightdale

FROM: Jeff Hochanadel PE, PTOE
Principal | North Carolina Transportation Group Leader
Timmons Group

SUBJECT: Traffic Impact Analysis (TIA) Scope
Poole Road Martin TIA

Scoping Meeting

A scoping meeting was held on March 10, 2022 between the NCDOT, Town of Knightdale, and Timmons Group to discuss project assumptions for the Poole Road Martin TIA.

Introduction

The proposed development will be located off Poole Road in Knightdale, NC. The proposed development will be built in one phase and is assumed to consist of the following:

- (up to) 185 single family homes

The purpose of this study is to determine the impacts of the proposed development on the existing traffic network.

Study Intersections

The Town of Knightdale recommended the following study area intersection(s):

- Poole Road / Hodge Road
- Poole Road / Bethlehem Road
- Poole Road / Smithfield Road
- Poole Road / Site Access 1
- Poole Road / Site Access 2

Study Scenarios

The study shall consist of the following scenarios as outlined in the scoping meeting.

1. Existing Year (2022)
2. Background + 1 Year (2026)

3. Build-Out + 1 (2026)
4. Build-Out + 1 (2026) with non-approved development traffic
5. Full Build-Out + 10 (2036)

Trip Generation

Provide assumptions pertaining to the following:

1. Existing Traffic Counts
 - a. Peak hour assumptions: 7:00 a.m. – 9:00 a.m. and 4:00 p.m. to 6:00 p.m.
 - b. Time of day / week / year assumptions: Tuesday – Thursday / School in session
 - i. Count date: March 15th, 2022
2. Growth Rate assumptions
 - a. 3% ambient growth rate through 2026 (Build + 1)
 - b. 1% ambient growth rate between 2026 (Build + 1) and 2036 (Build + 10)
3. Background Developments
 - a. Town of Knightdale provided the TIA for all approved area developments
 - i. Poole Road Apartment Development (aka Riverview Commons)
 - b. Town of Knightdale provided site plans for all non-approved area developments
 - ii. Knightdale Assemblage residential development (east side of Smithfield Road)
 - iii. Poole at Smithfield residential development (west side of Smithfield Road)
 - iv. Additional information will be sent when available.
4. Background Projects
 - a. HL-0031 will improve the Poole Road / Smithfield Street intersection. It is planned for 2023 construction and will be included in all 2026 and 2036 Background and Build analyses.
5. Proposed Development
 - a. Trips generated will be determined using the ITE Trip Generation Manual (Institute of Transportation Engineers, 10th Edition, 2017). Trip generation calculated using the proposed number of residential units and provided equation (per NCDOT guidelines).
 - b. AM peak hours trips generated total 34 incoming and 102 outgoing where PM peak hour trips totaled 115 incoming and 68 outgoing.

Table 1: Trip Generation Summary

ITE Land Use Code	Independent Variable	ADT	AM Peak Hour			PM Peak Hour		
			In	Out	Total	In	Out	Total
210 – Single Family Detached Housing	185 DU	1,831	34	102	136	115	68	183

SOURCE: Institute of Transportation Engineers' *Trip Generation Manual* 10th Edition (2017)

Trip Distribution / Assignment

The site trip distribution used for this site is based on collected traffic counts, engineering judgement, and discussions during the scoping meeting. The proposed trip distribution percentages are attached.

Analysis Methods

General assumptions: All projected trips will follow the approved trip distribution patterns.

Software / Synchro assumptions: Vehicular levels of service analysis will be performed using Synchro, supplemented by SimTraffic (where necessary)

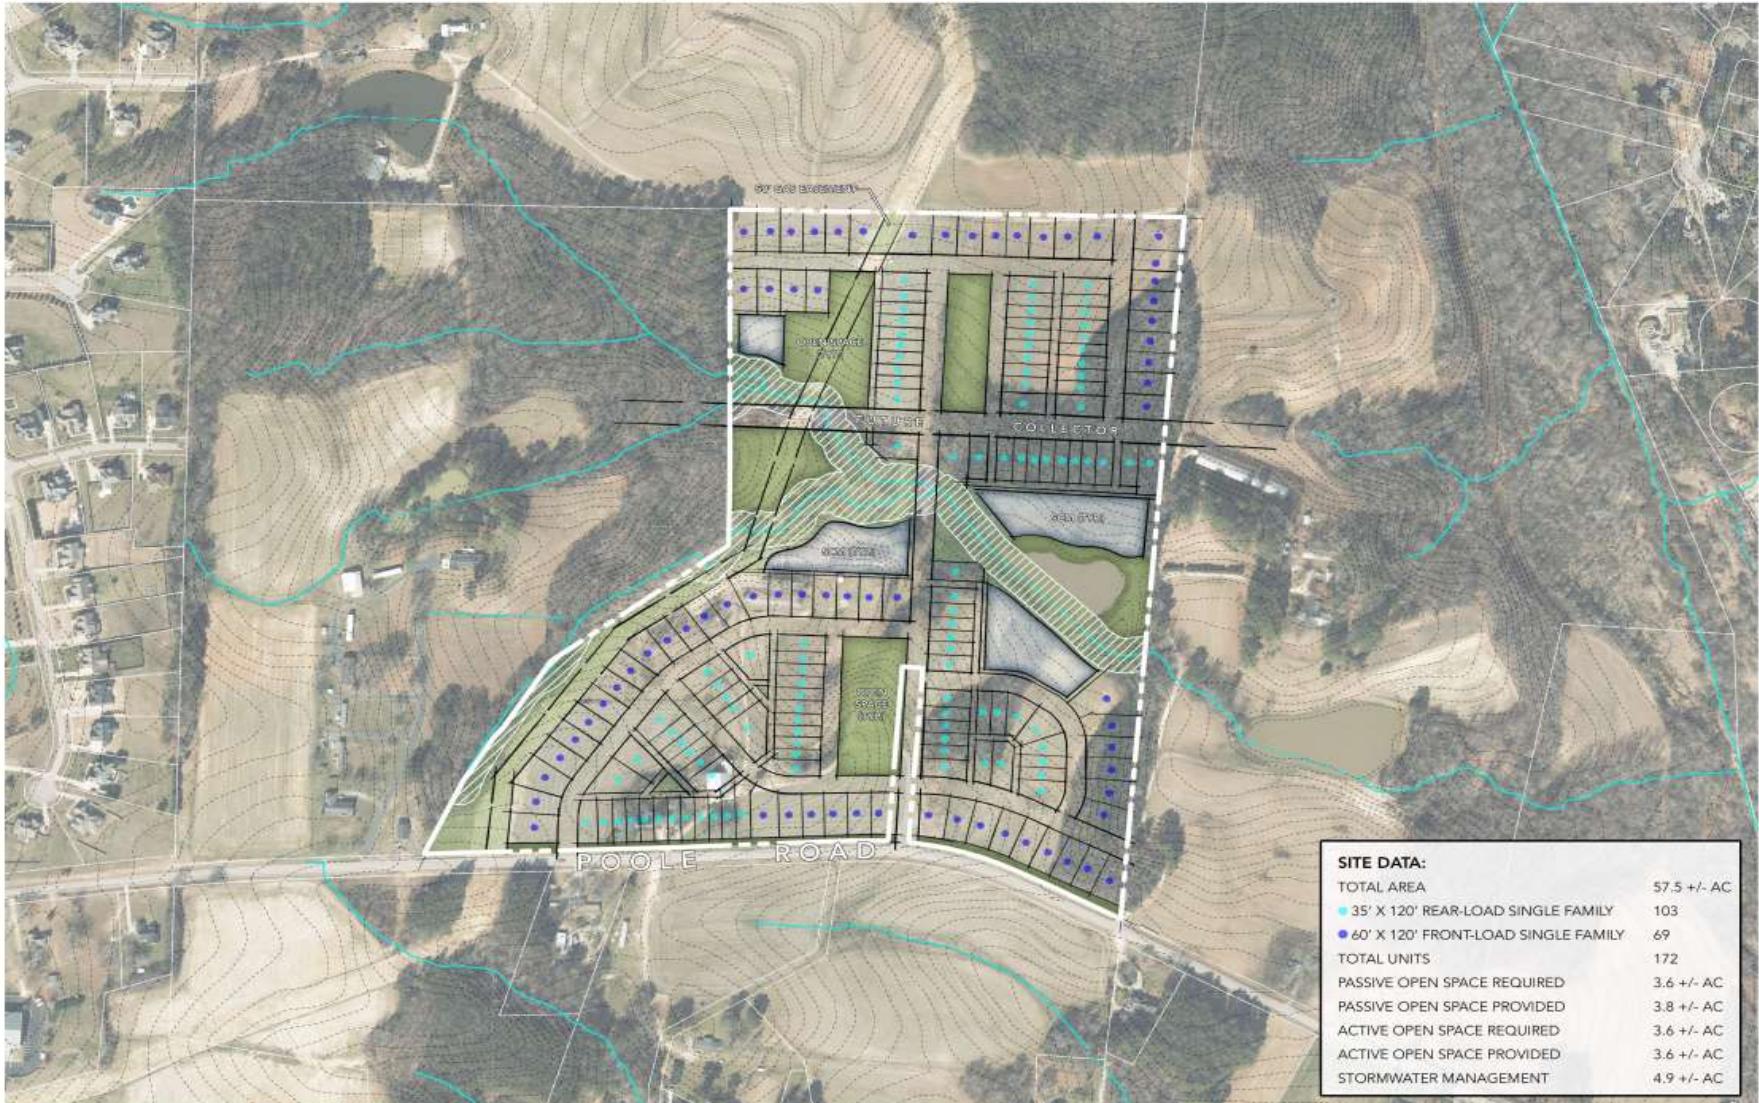

Internal capture assumptions: None

Multi-modal reduction assumptions: No reduction will be assumed due to multi-modal

Heavy Vehicle percentage assumptions: 2%

Signalized Intersections assumptions: Timings will be based on signal plans.

A PHF of 0.90 will be used for all AM and PM analyses.

Poole Road Martin TIA Meeting Minutes (3/10/22)

Attendees:

Clarence Bunting	NCDOT	cbunting@ncdot.gov
Kevin Lewis	Town of Knightdale	kevin.lewis@knightdalenc.gov
Andrew Spiliotis	Town of Knightdale	andrew.spiliotis@knightdalenc.gov
Beth Blackmon	Timmons Group	beth.blackmon@timmons.com
Jeff Hochanadel	Timmons Group	jeff.hochanadel@timmons.com

Items Discussed:

- Meeting was held to discuss the Poole Road Martin TIA scoping
- The project build-out will include:
 - 172 single-family homes
 - Potential site plan change (MOU to include finalized trip generation if possible)
- The project will be constructed by 2025
- Analyses will include:
 - 2021 Existing
 - 2026 Background
 - 2026 Build
 - 2026 Build (with non-approved development traffic)
 - 2036 Future
- Holistic look at 1,400+ lots along Poole Road for Town Council
- The project study area intersections will include the following:
 - Poole Road / Hodge Road
 - Poole Road / Bethlehem Road
 - Poole Road / Smithfield Road
 - Poole Road / Site Access 1
 - Poole Road / Site Access 2
- Traffic counts to be conducted when traditional calendar schools are in session (assumed – March 15th, 2022)
- 3% ambient growth rate through 2026 (Build + 1)
- 1% ambient growth rate between 2026 (Build + 1) and 2036 (Build + 10)
- HL-0031 will improve the Poole Road / Smithfield Road intersection
- There is one approved development within the study area:
 - Riverview Commons Apartments
 - NW Poole Road / Hodge Road intersection quadrant
 - Town of Knightdale (Town) to provide TIA
- There are two non-approved developments within the study area:
 - Terramor Homes Residential Development
 - To be constructed off Smithfield Road (east side)
 - TIA scoped with Ramey-Kemp & Associates (RKA)
 - RKA finalizing trip generation
 - Residential development
 - To be constructed off Smithfield Road (west side)
 - Town to provide information to Timmons Group
- Trip distribution suggestions:
 - Overall based on existing traffic patterns
 - ~5% to/from Clayton
 - Percentage towards Bethlehem Road / I-40
 - Percentage eastbound along Poole Road towards Lake Myra Elementary
 - Percentage eastbound along Poole Road towards Wendell Falls Commercial
- Greenway east-west through site (needed on site plan) – maybe side path along Poole
- Timmons Group to provide meeting minutes and MOU
- MOU will be provided in lieu of the NCDOT's TIA scoping checklist

Subject: RE: Poole Road Martin TIA MOU

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Thanks for sending this along Jeff. **Please also add in proposed trip assignment percentages to the MOU so that we may review and reach an agreement before the TIA is submitted.**

Also, I've link some of the background developments to assist with the TIA ([!\[\]\(3aab25fa446c2e11a4a59bcf48d49948_img.jpg\) Poole Road TIA Background Info](#)). They include:

Approved Developments:

- Riverview Commons (aka Poole Road Apartment Development)

Proposed Developments (optional / encouraged to model – let me know if you have any questions on this):

- Poole Rd Assemblage – link includes project info / site plan, will forward MOU when it's available
- Residential development west of Smithfield Road – attached project info / site plan, the land

has been purchased but project has not advanced to pursuing a TIA yet

I've also attached the NCDOT intersection improvement plans for the Smithfield Rd at Poole Rd intersection.

Let me know if you have any questions.

Thanks,

Andrew Spiliotis

Subject: Poole Road Martin TIA MOU

Be Advised: This email originated from outside of the Town of Knightdale, NC

All,

Attached is the Poole Road Martin TIA MOU. For your reference, I have included the TIA scoping meeting minutes.

It should be noted that the current site plan shows 172 single-family units. The site plan will be updated; however, the number of residential units should not increase beyond 185 units (as shown in the MOU).

Please do not hesitate to contact me with any questions.

Thank You!

Jeff

Appendix C – Traffic Signal Plans

3 Phase
Fully Actuated
(Isolated)

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated January 2018 and "Standard Specifications for Roads and Structures" dated January 2018.
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Enable Backup Protect for phase 2 to allow the controller to clear from phase 2+6 to phase 2+5 by progressing through an all red display.
- Set all detector units to presence mode.
- Pavement markings are existing.

(Isolated)

NOTES

- Refer to "Roadway Standard Drawings NCDOT" dated July 2006 and "Standard Specifications for Roads and Structures" dated July 2006.
- Do not program signal for late night flashing operation unless otherwise directed by the Engineer.
- Set all detector units to presence mode.
- In the event of loop replacement, refer to the current ITS and Signals Design Manual and submit a Plan of Record to the Signal Design Section.
- Locate new cabinet so as not to obstruct sight distance of vehicles turning right on red.
- Pavement markings are existing.

Intersection Summary

Area Type: Other

Cycle Length: 135

Actuated Cycle Length: 123.3

Natural Cycle: 110

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.05

Intersection Signal Delay: 49.7

Intersection LOS: D

Intersection Capacity Utilization 92.8%

ICU Level of Service F

Analysis Period (min) 15

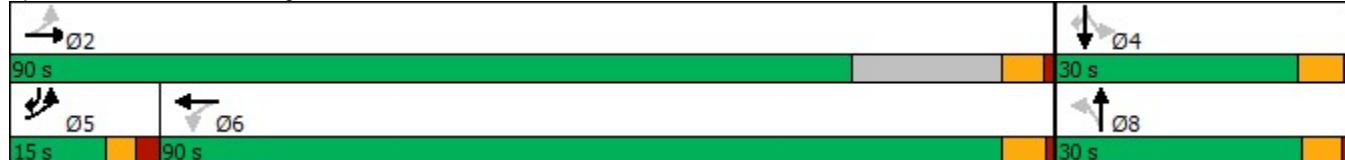

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 135

Actuated Cycle Length: 71.9

Natural Cycle: 120

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.52

Intersection Signal Delay: 100.7

Intersection LOS: F

Intersection Capacity Utilization 91.0%

ICU Level of Service E

Analysis Period (min) 15

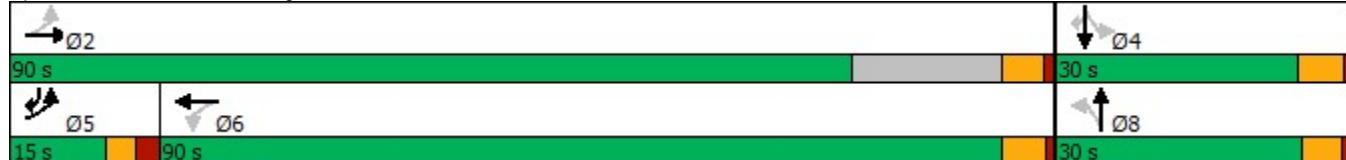

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 90

Actuated Cycle Length: 74.4

Natural Cycle: 65

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.87

Intersection Signal Delay: 25.9

Intersection LOS: C

Intersection Capacity Utilization 96.8%

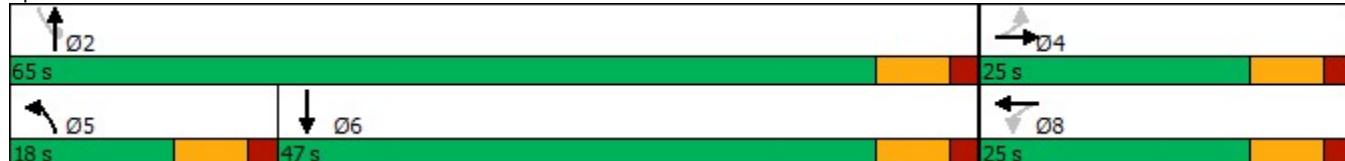

ICU Level of Service F

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 94.4

Natural Cycle: 100

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.98

Intersection Signal Delay: 37.8

Intersection LOS: D

Intersection Capacity Utilization 86.4%

ICU Level of Service E

Analysis Period (min) 15

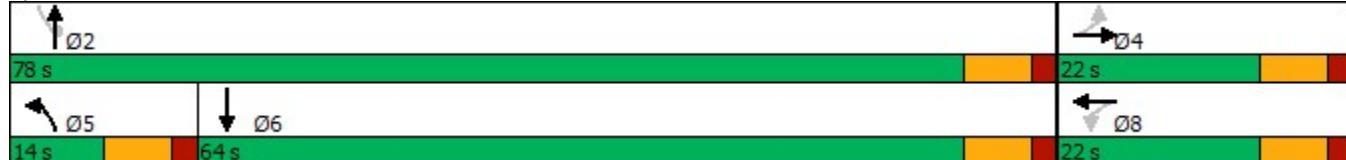

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 135

Actuated Cycle Length: 130.8

Natural Cycle: 130

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.19

Intersection Signal Delay: 57.6

Intersection LOS: E

Intersection Capacity Utilization 95.5%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 135

Actuated Cycle Length: 73.8

Natural Cycle: 110

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 1.55

Intersection Signal Delay: 103.2

Intersection LOS: F

Intersection Capacity Utilization 92.7%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

**Poole Road Apartment Development – Transportation Impact Analysis
Knightdale, NC
Prepared for Signature Property Group
October 15, 2021**

Executive Summary

Site Overview

The Poole Road Apartment Development is to be located on the northwest quadrant of Hodge Road and Poole Road in Knightdale, North Carolina. As currently planned, this site development will consist of 364 dwelling units of apartments and 30 dwelling units of townhomes. The full build-out year is assumed as 2023. This development utilizes two (2) site accesses, one (1) full movement access on Hodge Road and one (1) full movement access on Poole Road.

Trip Generation

Based on the rates and equations in the ITE Trip Generation Manual (10th Edition) this development has a trip generation potential of 2,168 daily trips, 137 trips in the AM peak and 173 trips in the PM peak.

Conclusion

Based on the analysis, study intersections are expected to operate at LOS D or better with the exception of Hodge Road at I-87 Northbound Ramp, Spectrum Drive and Poole Road. Though they are expected to operate at LOS E or F, they are within the 25% allowable increase by NCDOT Congestion Management. The site trips of the proposed developments are approximately 5% of the intersection volumes. **However, the planned improvements by the Town of Knightdale and City of Raleigh to widen Hodge Road should be pursued as it will increase capacity for the future volumes along the study intersections.**

Based on NCDOT turn lane warrants and AADT on the roadways, it is recommended to provide right and left turn lanes at the site accesses for the proposed development.

In conclusion, this study has reviewed the impacts of both background traffic and this development traffic. Please note that all site accesses should be designed according to the NCDOT Standards.

The recommended improvements at the study intersections for 2023 full build are summarized in Table A.

Table A – Recommended Improvements Summary

Intersection	Full Build
I-87 Southbound Ramp at Hodge Road	<ul style="list-style-type: none"> • No Improvements are recommended
I-87 Northbound Ramp at Hodge Road	<ul style="list-style-type: none"> • No Improvements are recommended
Hodge Road at Panther Rock Road	<ul style="list-style-type: none"> • No Improvements are recommended
Hodge Road at Spectrum Drive	<ul style="list-style-type: none"> • No Improvements are recommended
Hodge Road at Poole Road	<ul style="list-style-type: none"> • No Improvements are recommended
Hodge Road at Site Access	<ul style="list-style-type: none"> • Provide a southbound right turn lane with 100 feet of storage and appropriate taper length • Provide a northbound left turn lane with 100 feet of storage and appropriate taper length • Design site access according to NCDOT standards
Poole Road at Site Access	<ul style="list-style-type: none"> • Provide an eastbound left turn lane with 100 feet of storage and appropriate taper length • Provide a westbound right turn lane with 100 feet of storage and appropriate taper length • Design site access according to NCDOT standards
